Shopify Setup

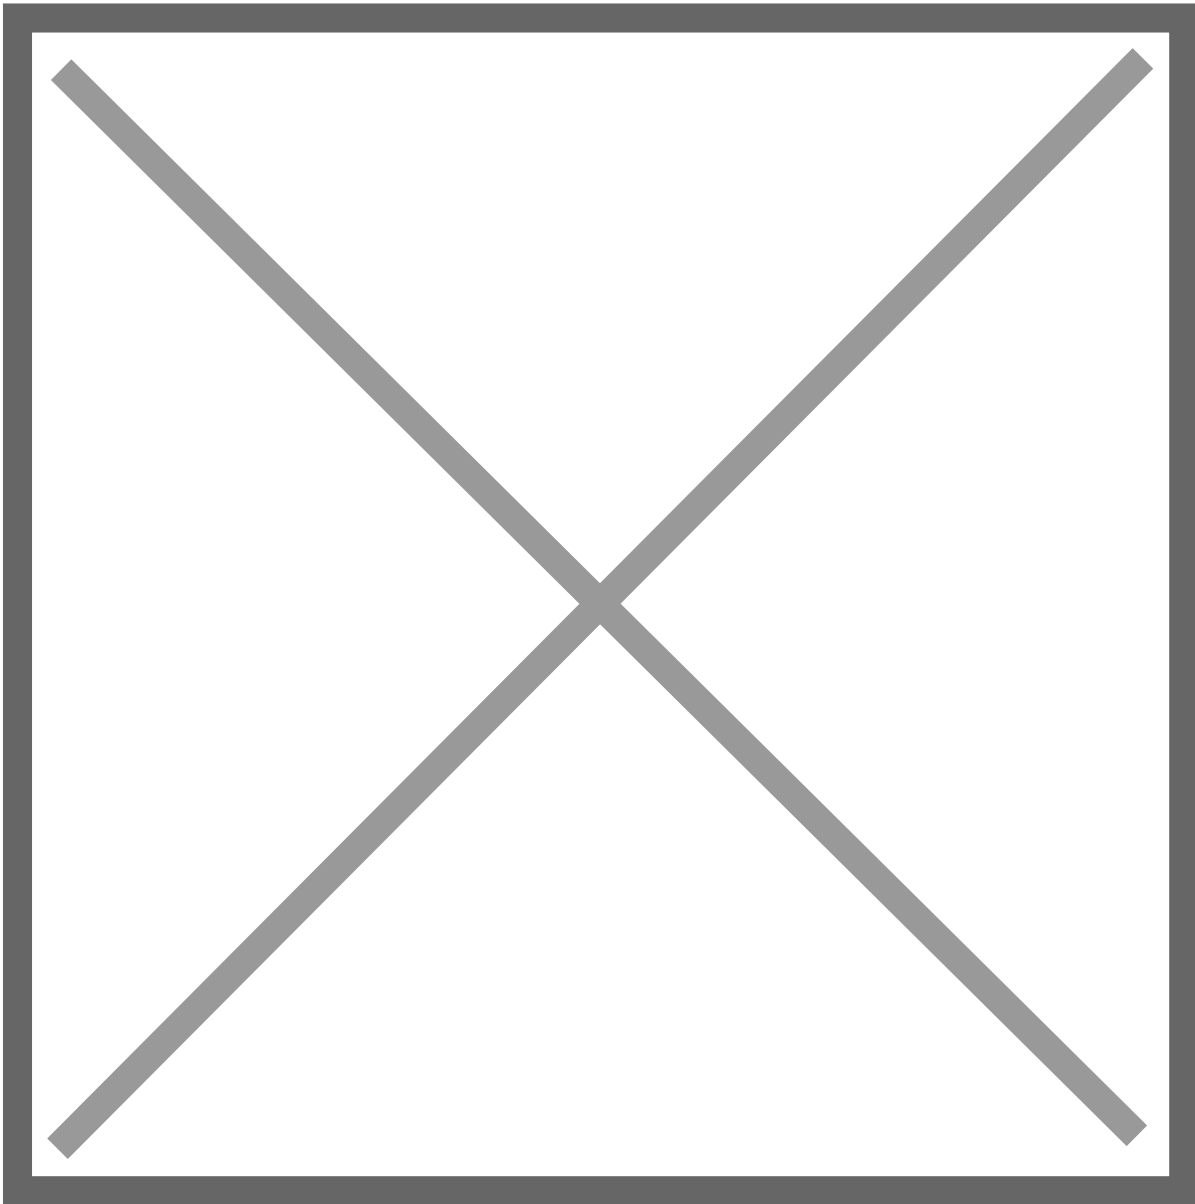

Scroll to the bottom of the page to find (Create Webhooks)

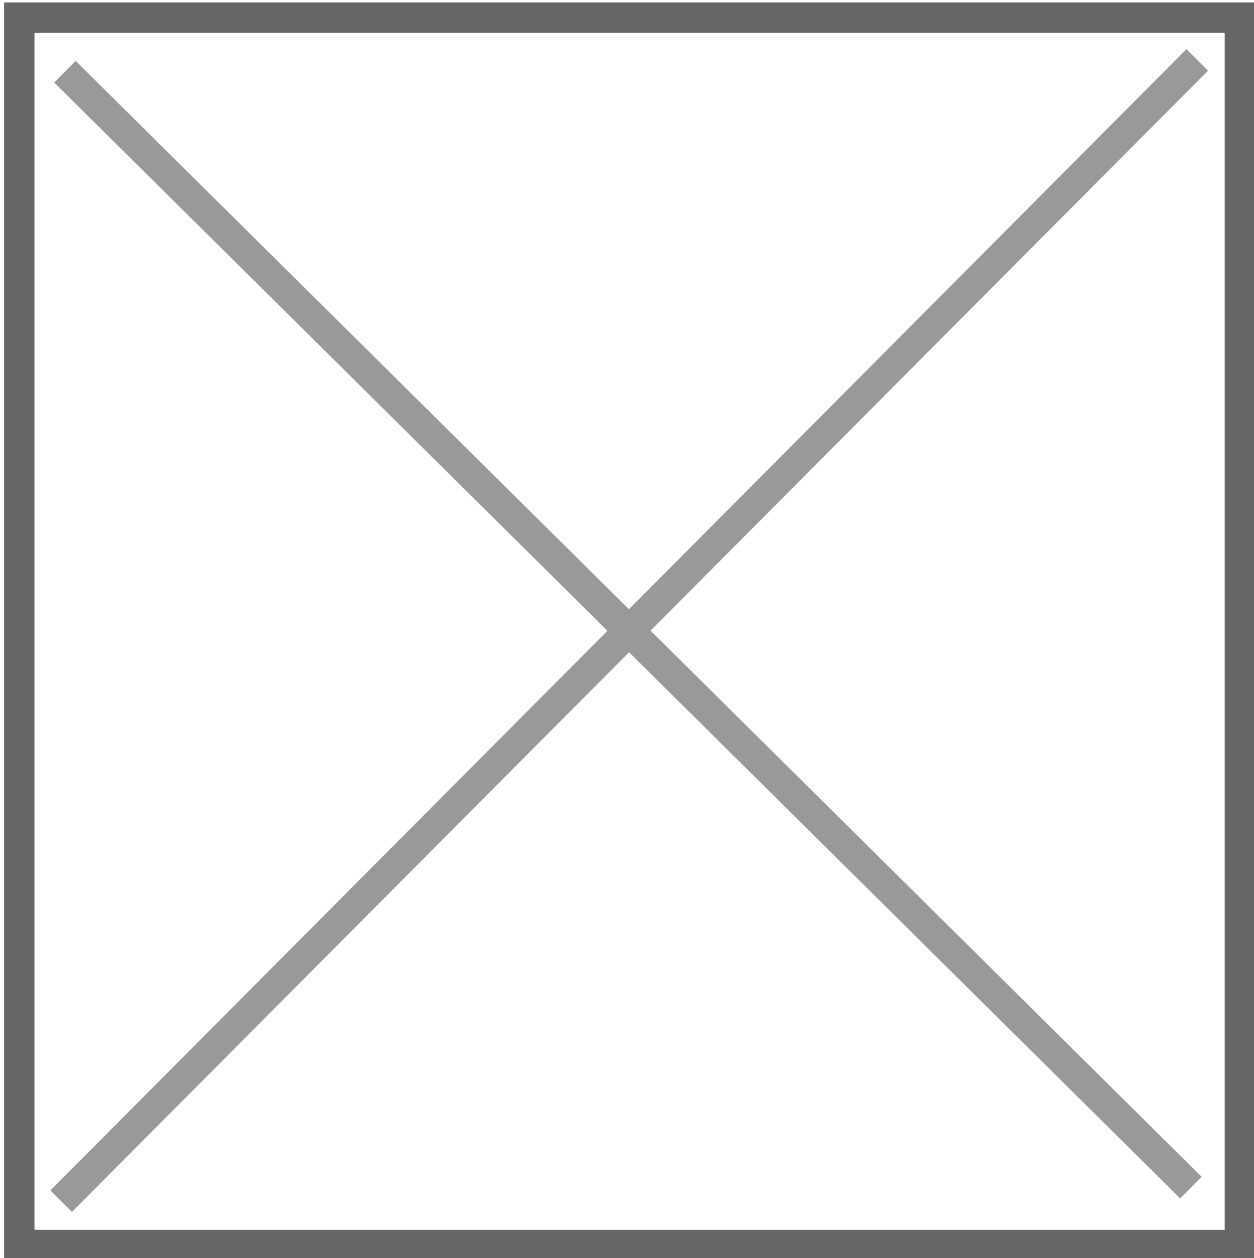

Select Order Creation

Enter this into the URL

https://SERVER_PATH/csp/NAMESPACE/api/shopify/orders/create

Once you have created the webhook, you will be given a verification code which needs to be setup in Webaccounting.

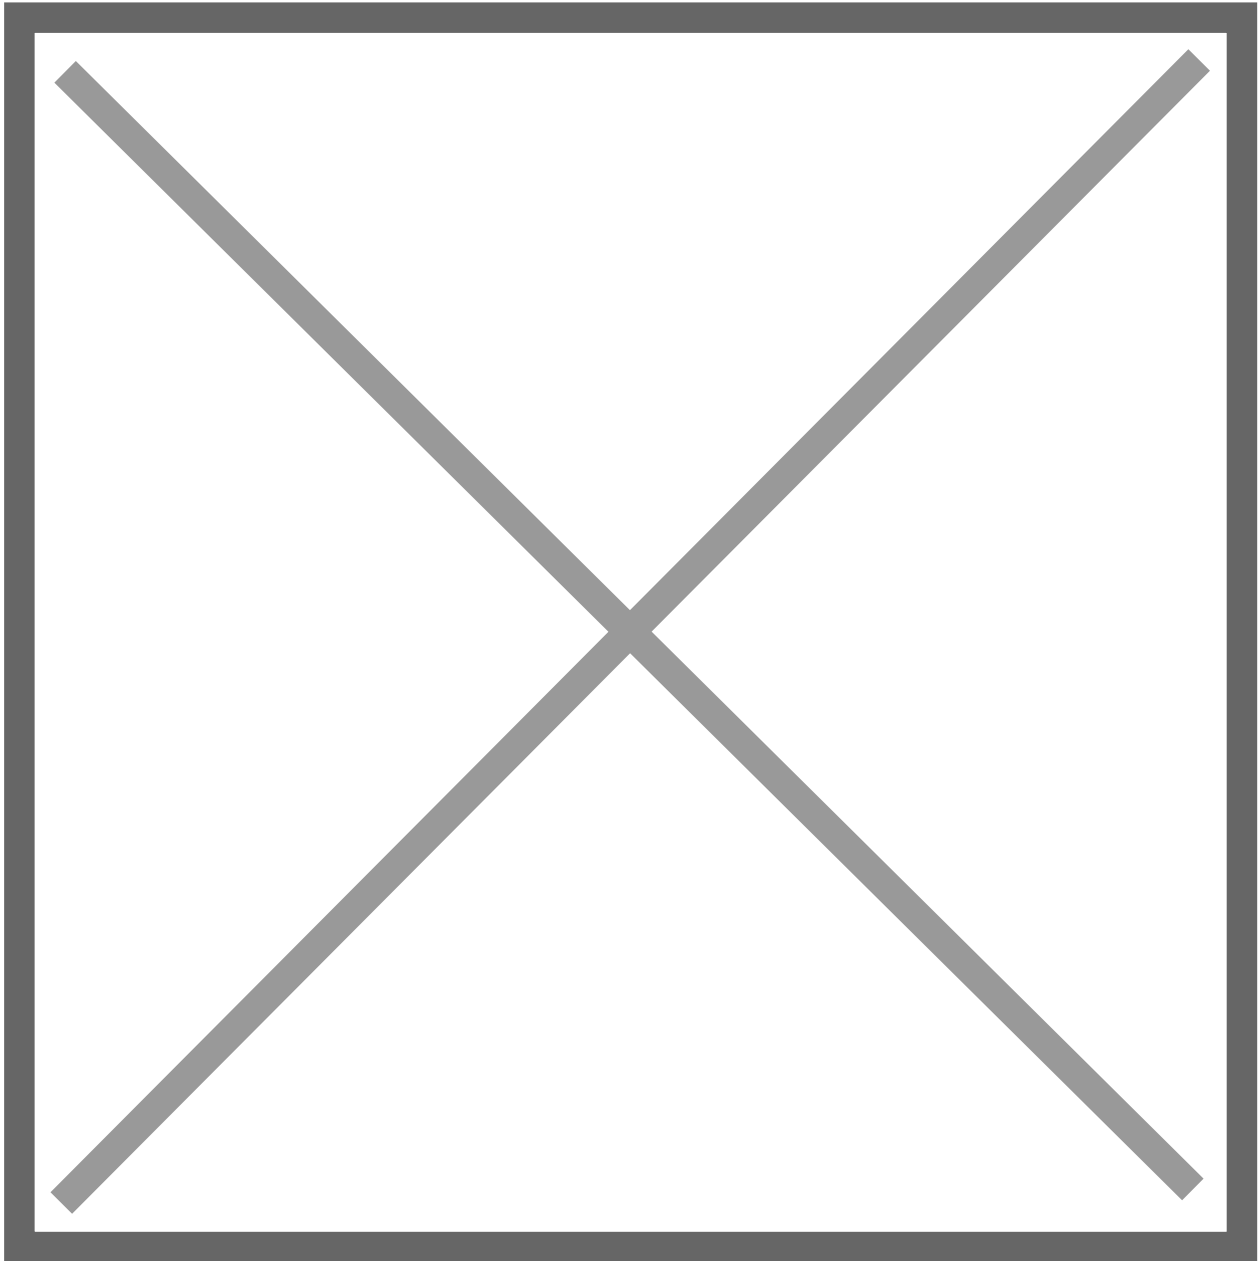

Go to the System > Configuration Module > Security > API Setup

Select Shopify Webhook for incoming orders from Shopify

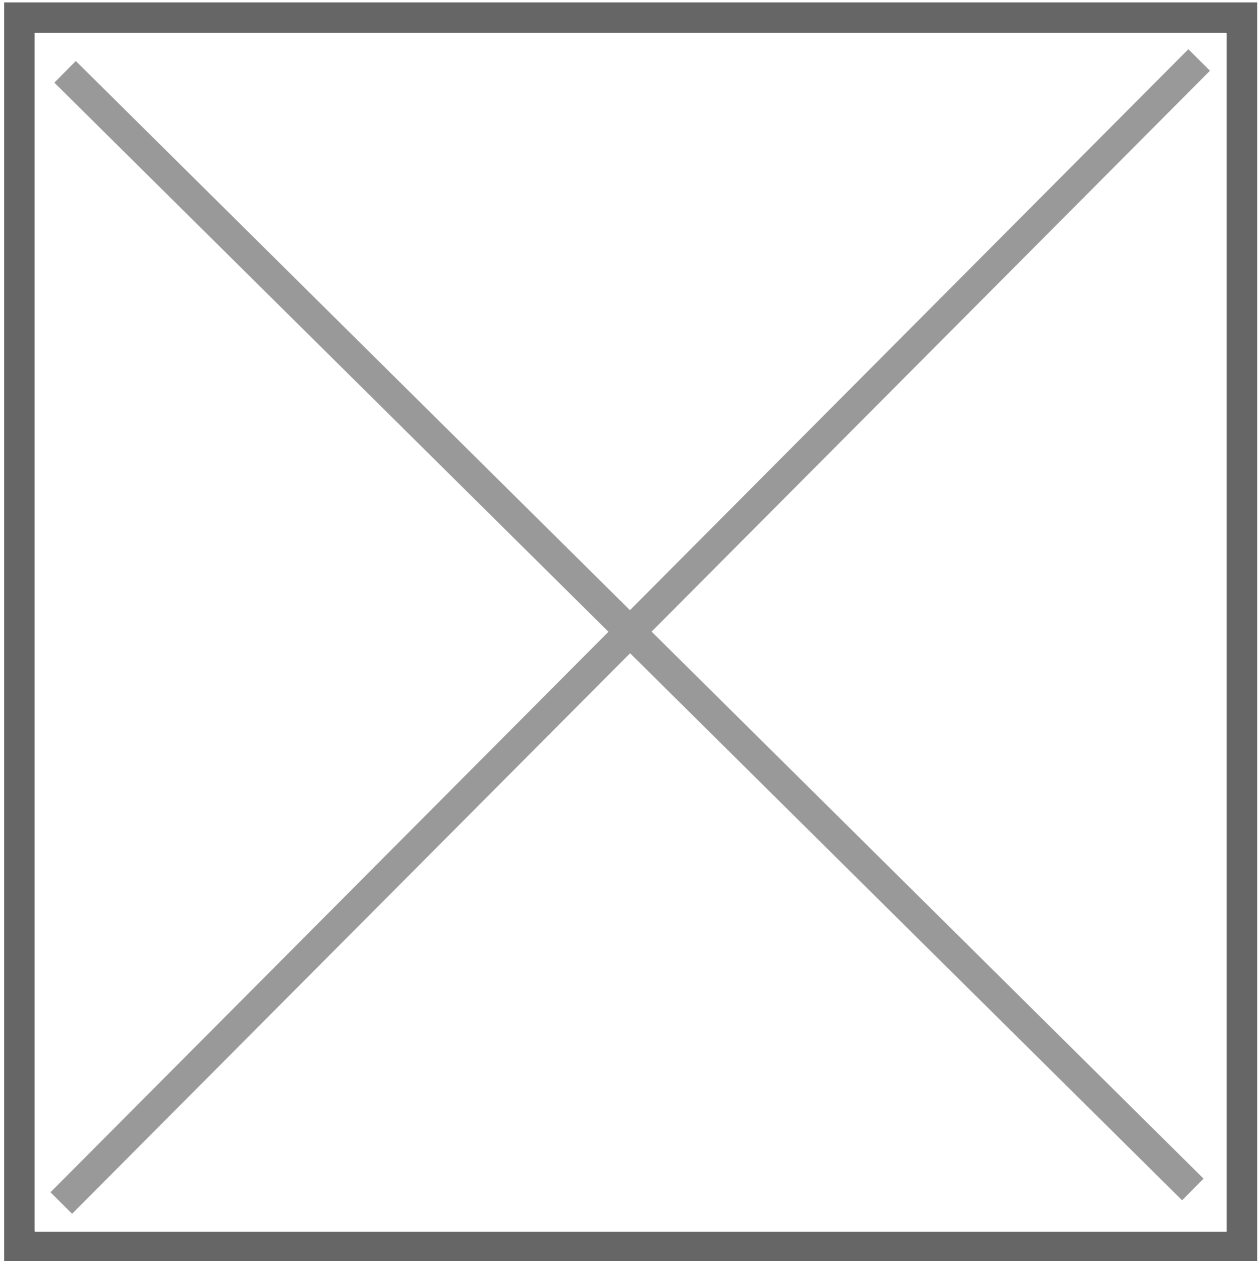

Paste the Webshop verification code into the password and save

Ensure the Active tick box is ticked

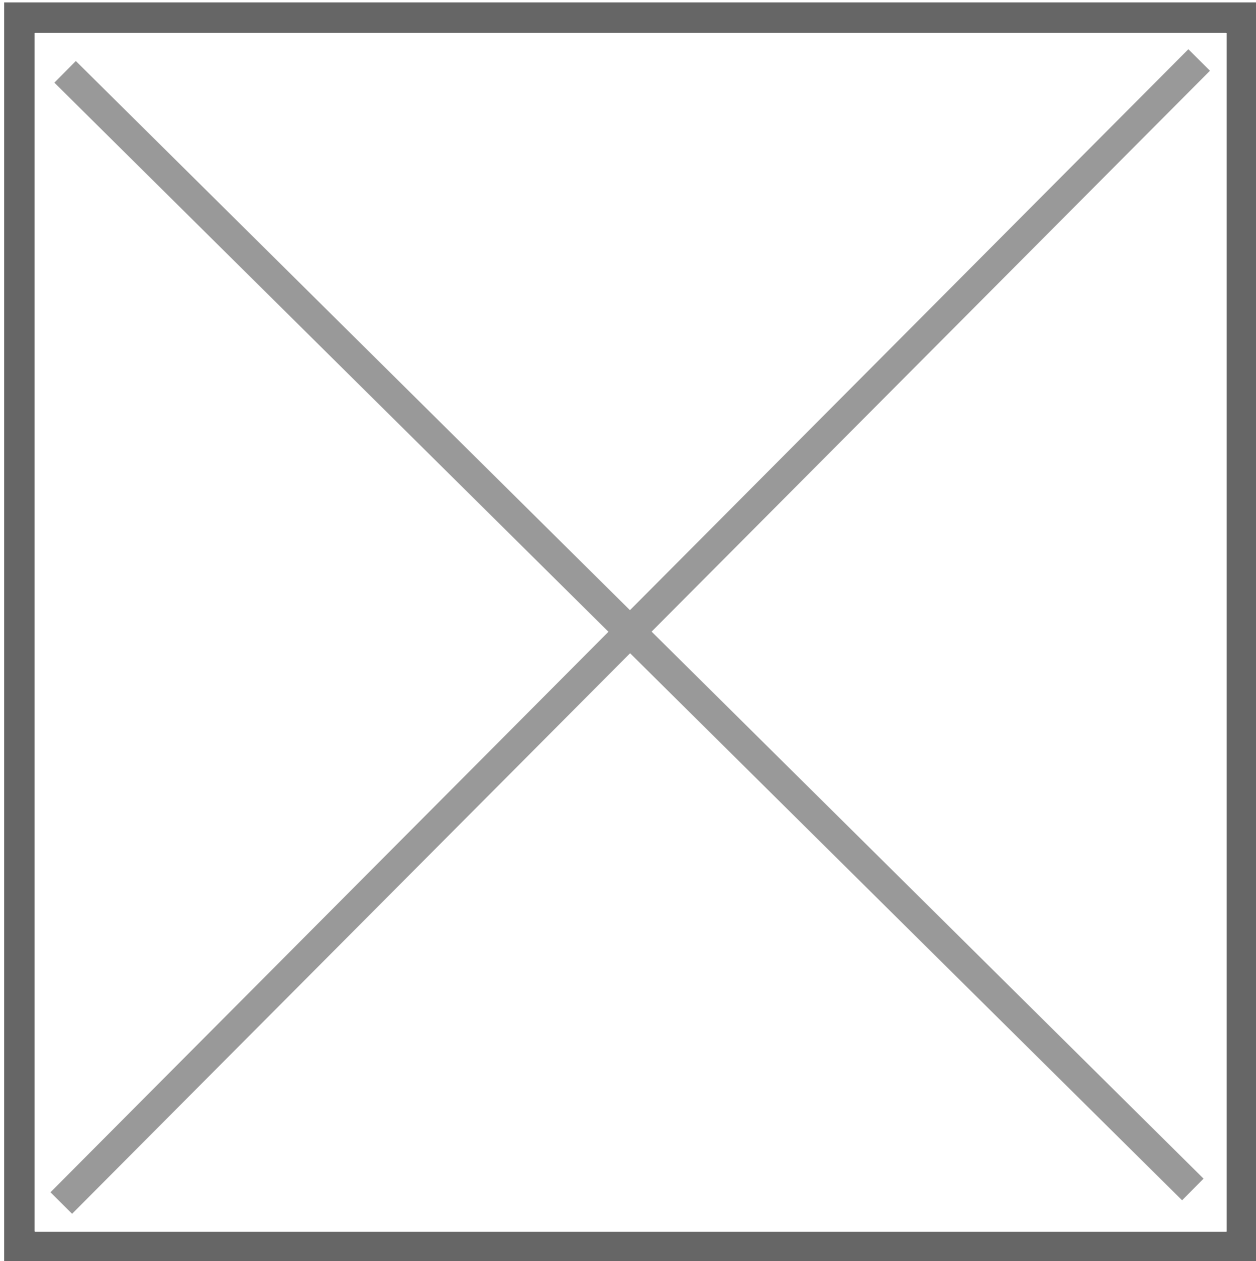

Now to setup the link from Webaccounting to Shopify

We have to get the username and password from Shopify

Click on Create new private app

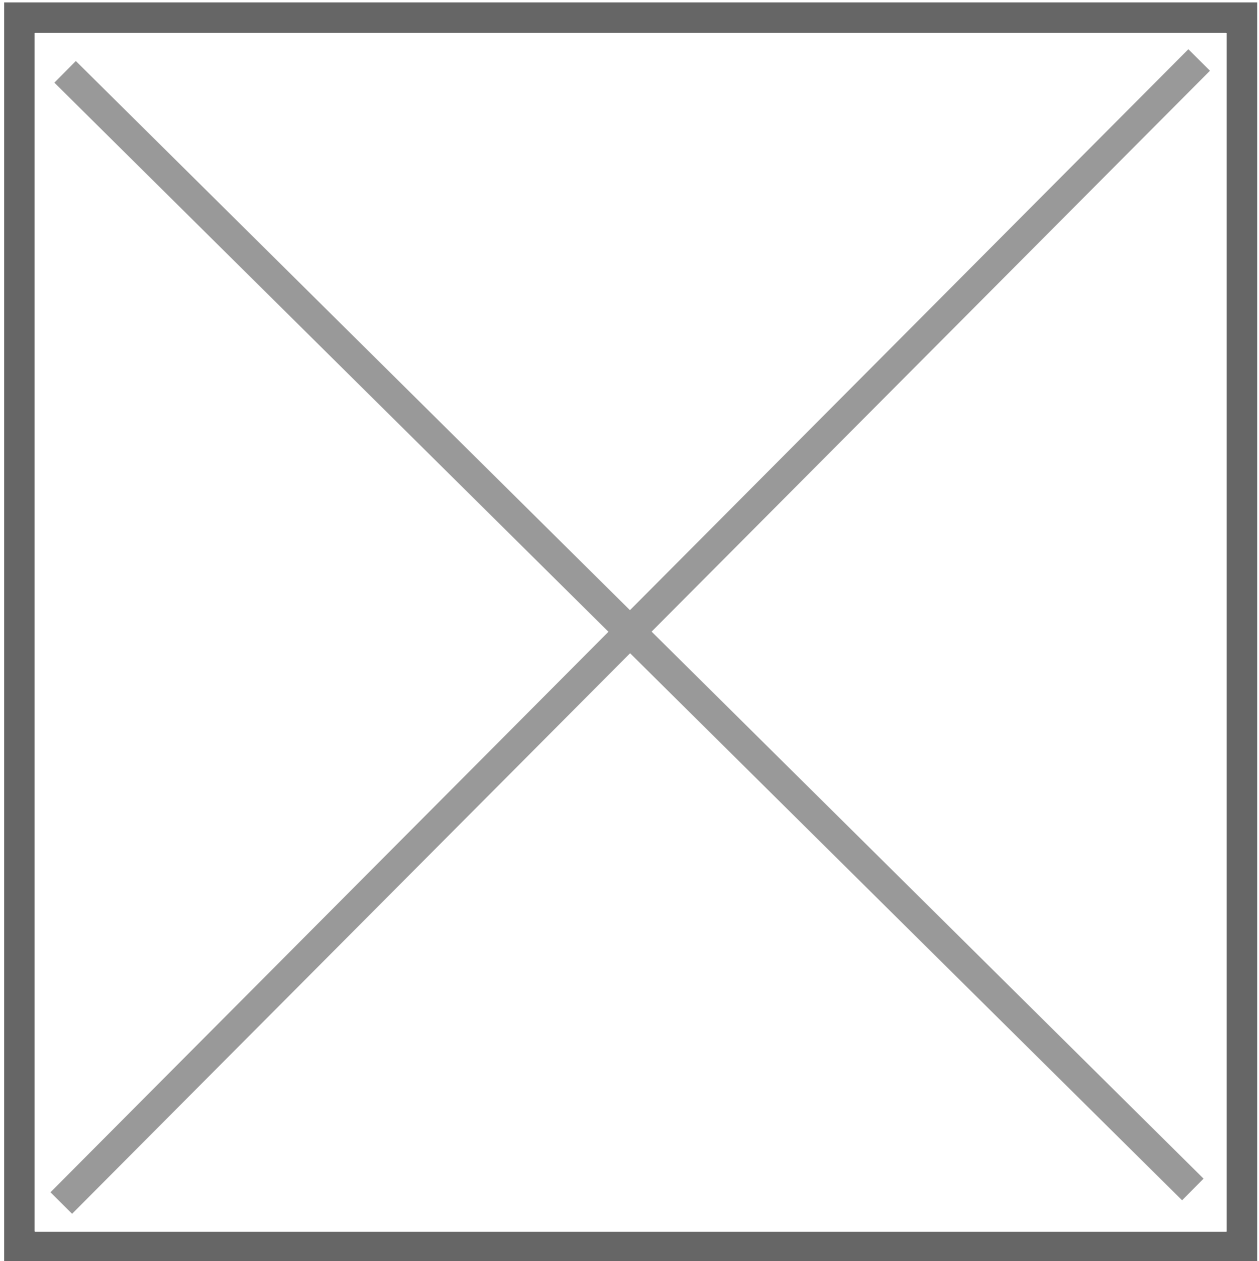

Enter the App name

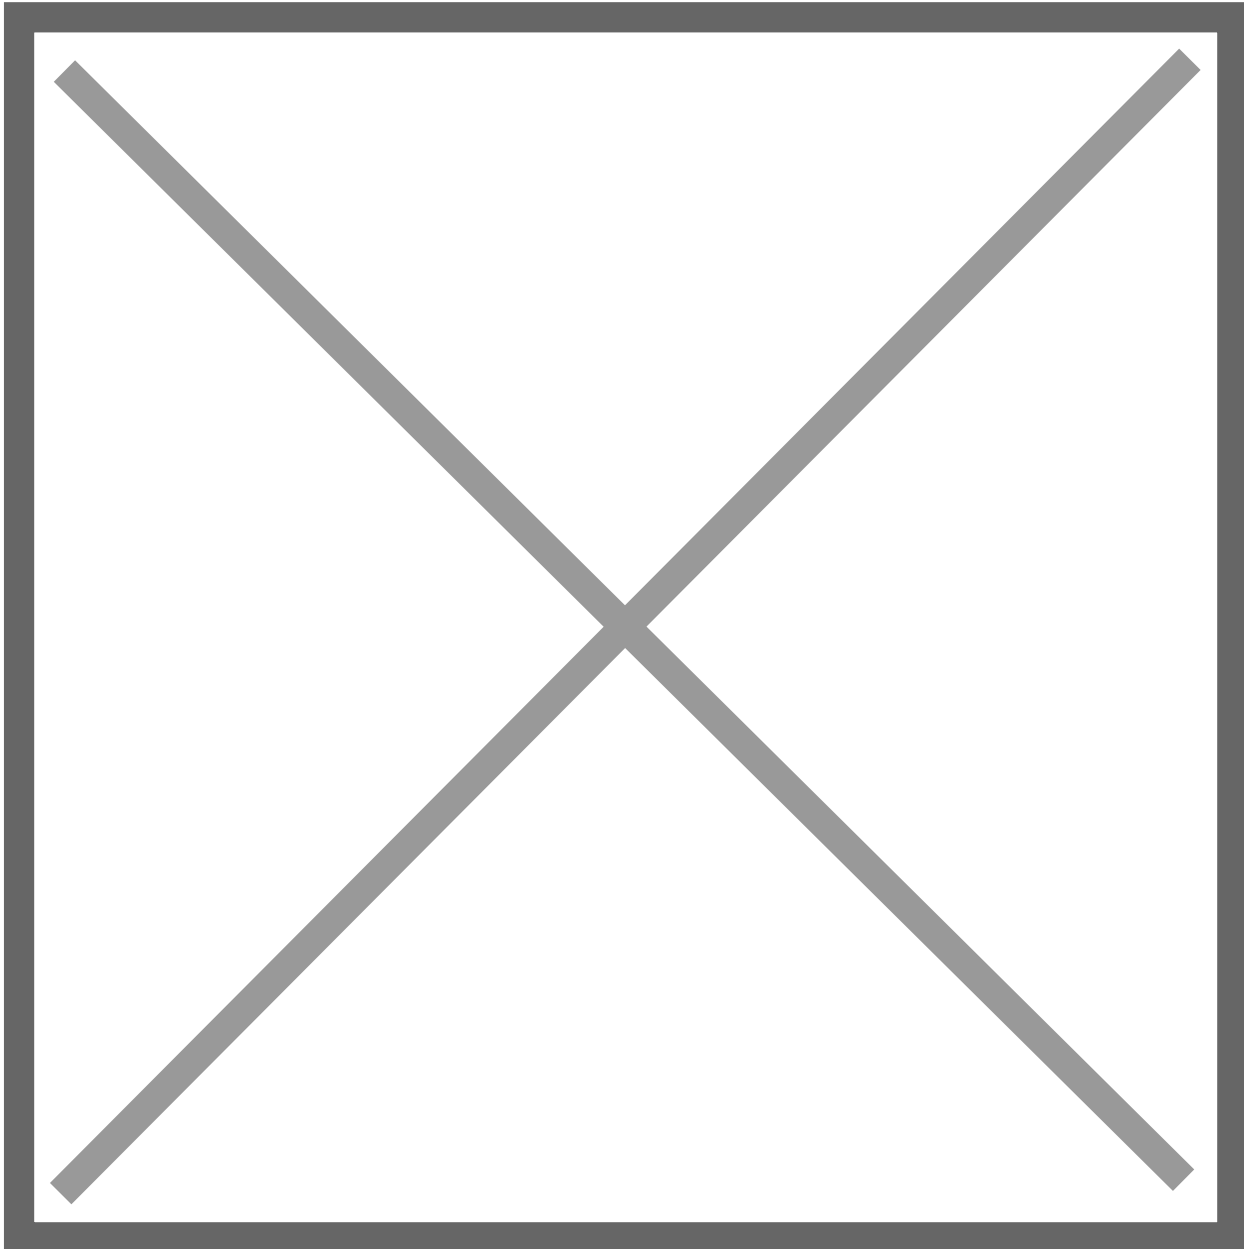

Enter the developer email address - peter@webaccounting.co.za

Select Products and change to Read and write

Open up inactive and find customers and change to read and write

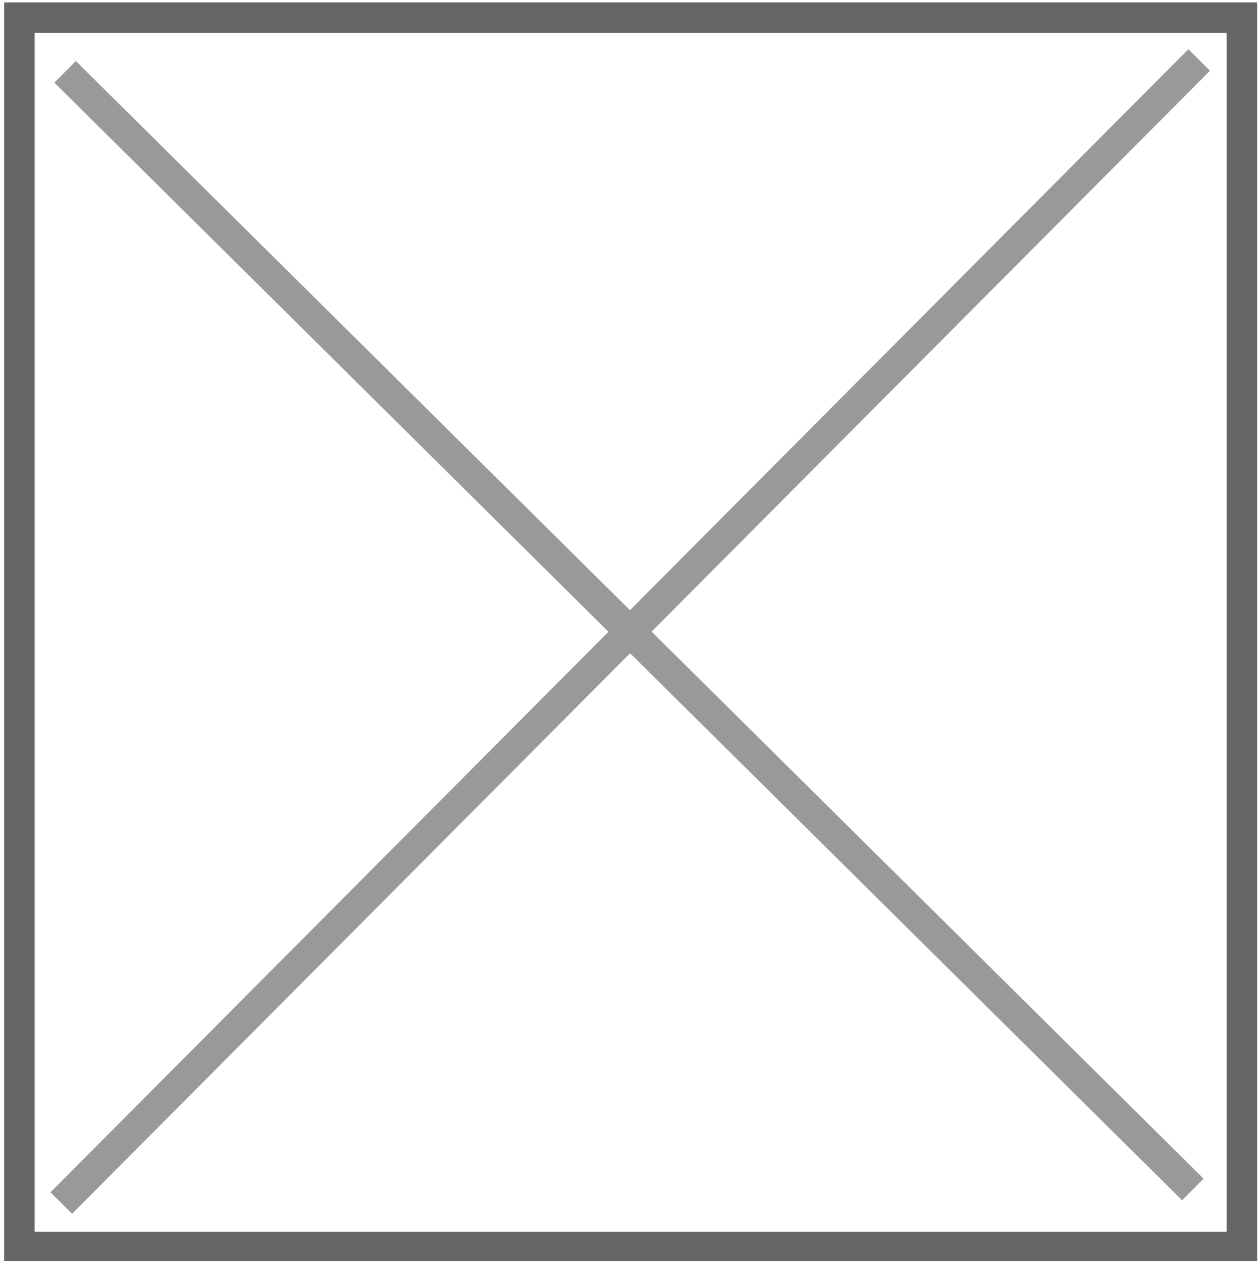

After you click save at the bottom of the screen, you will get a confirmation screen

After you have created the app, there will an API key and Password

You will need these two items for the Webaccounting setup

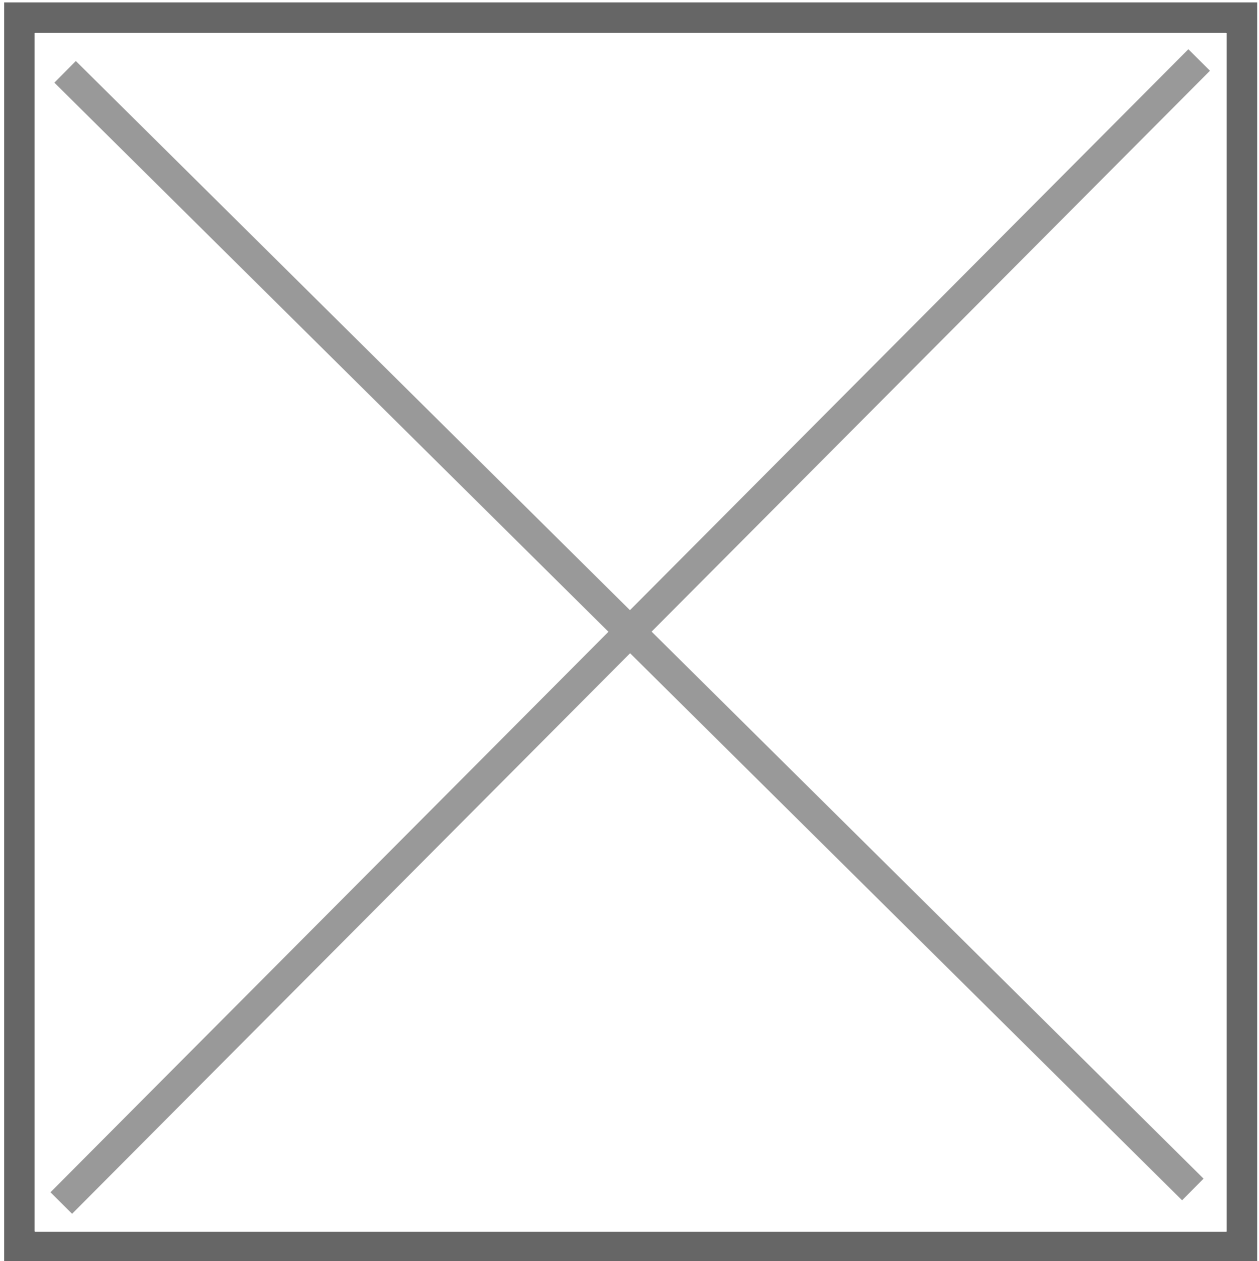

Setup the outgoing Webaccounting to Shopify integration

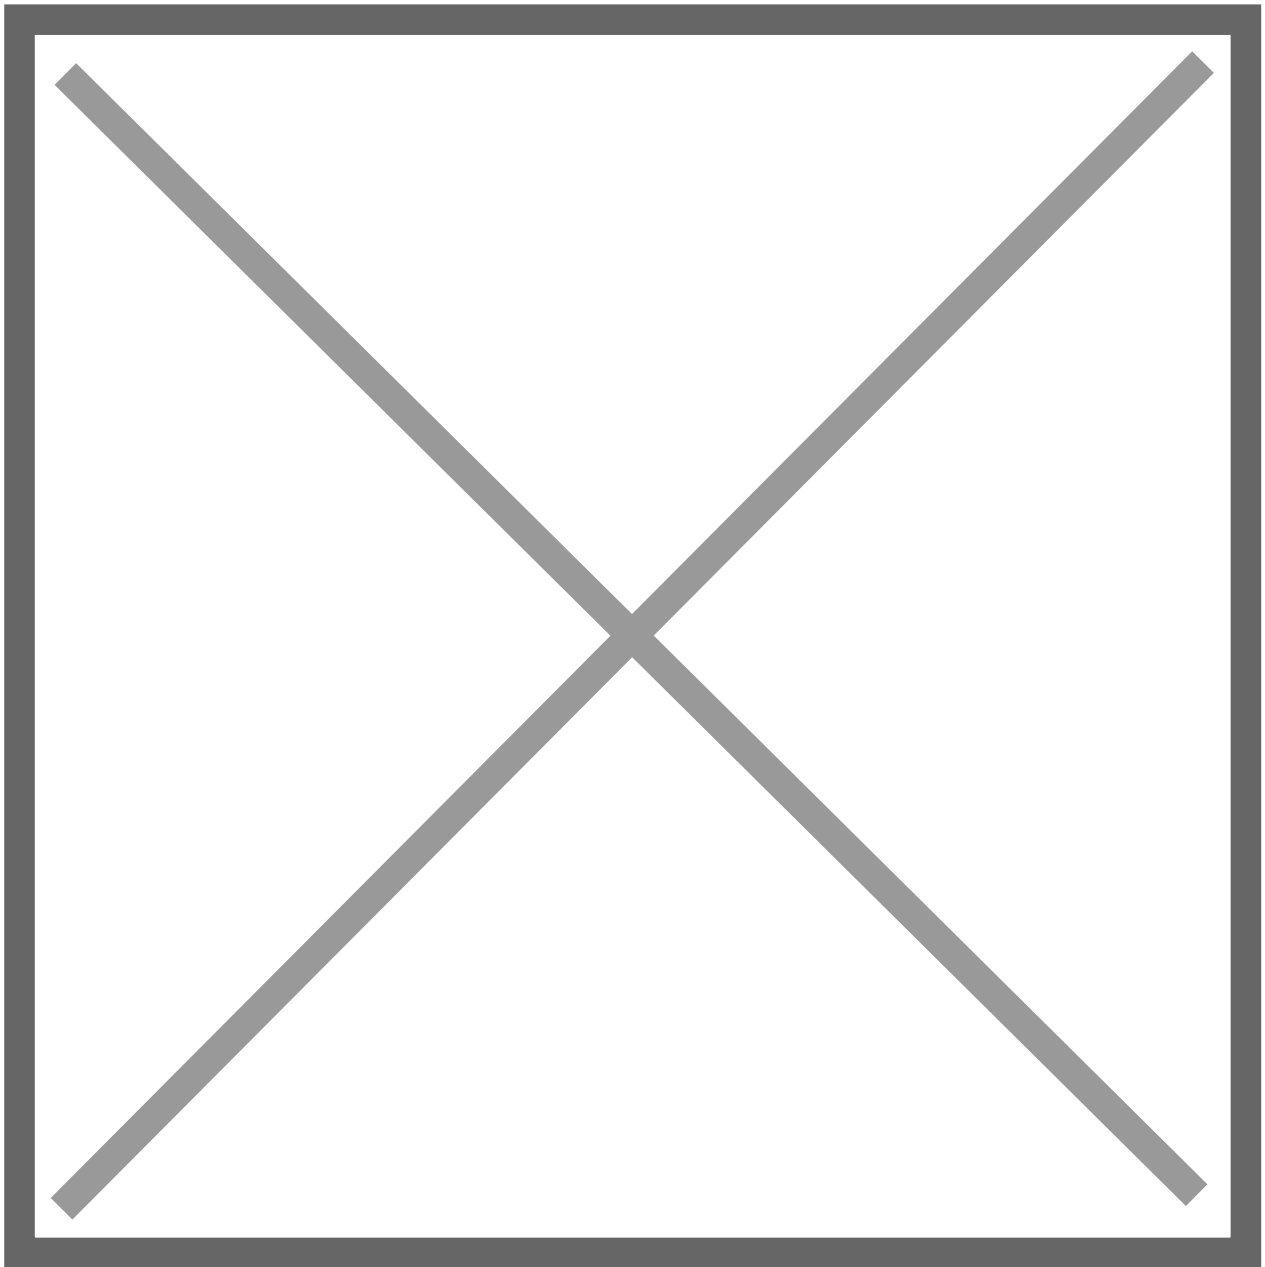

Select Shopify Admin API in dropdown

Put in your store URL

Put in your username and password from your Admin API private app that was setup

Go to the functions tab to enable the Debtors and inventory

Customer Setup

Customer setup to Shopfiy

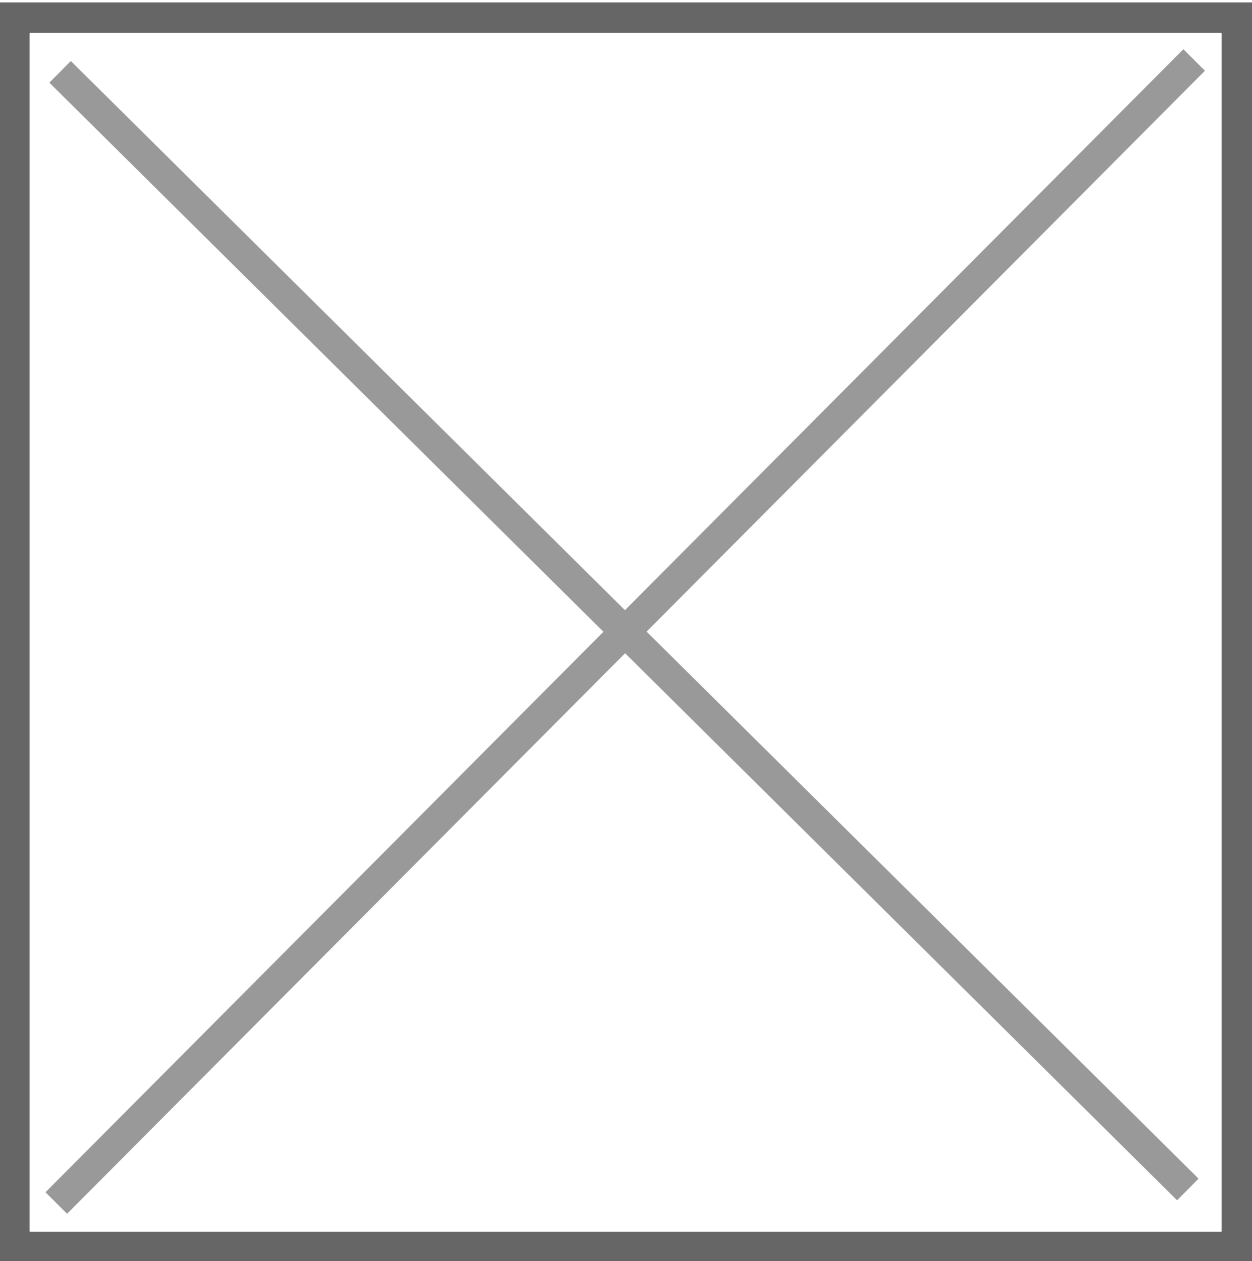

When you setup your customer and you tick the Sync to Webshop

Then Webaccounting will create an account on Shopify with the default user.

Shopify will then send out an email to create an account to the contact and then the client will verify their account

Then Webaccounting will create the customer on Shopify with the following fields

1	Customer Code
2	Customer name
3	Customer Address
4	Customer default contact person
5	Customer contact email address
6	Customer contact mobile number

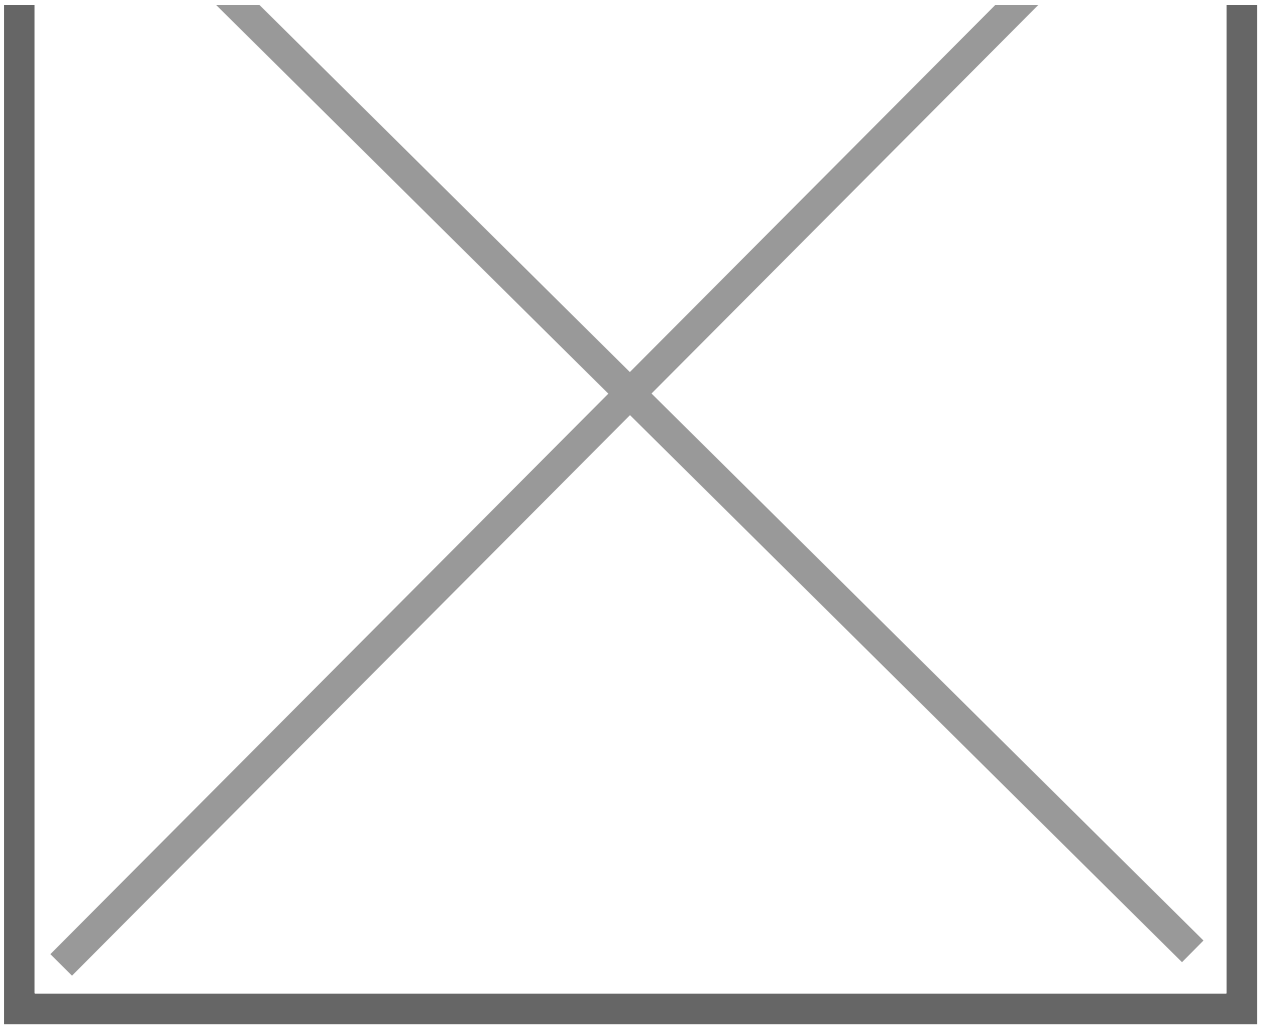

Inventory Setup

Inventory setup to Shopfiy

When you setup your inventory item and you tick the Sync to Webshop

Then Webaccounting will create the item on Shopify with the following fields

1	Inventory Code
2	Description
3	Long Description
4	Group Code
5	Default price structure
6	Default cost price
7	Default sell price
8	Upload the primary image

Email Confirmation

Customer setup to Shopfiy

After the customer has been created on Shopify, it will send an email to the customer to activate their account.
