

Ship Logic

This API is used for the courier company link up allowing one to automatically create a shipping document on the courier company system.

There are a few steps one needs to do in order for this to work.

Create the API to Ship Logic

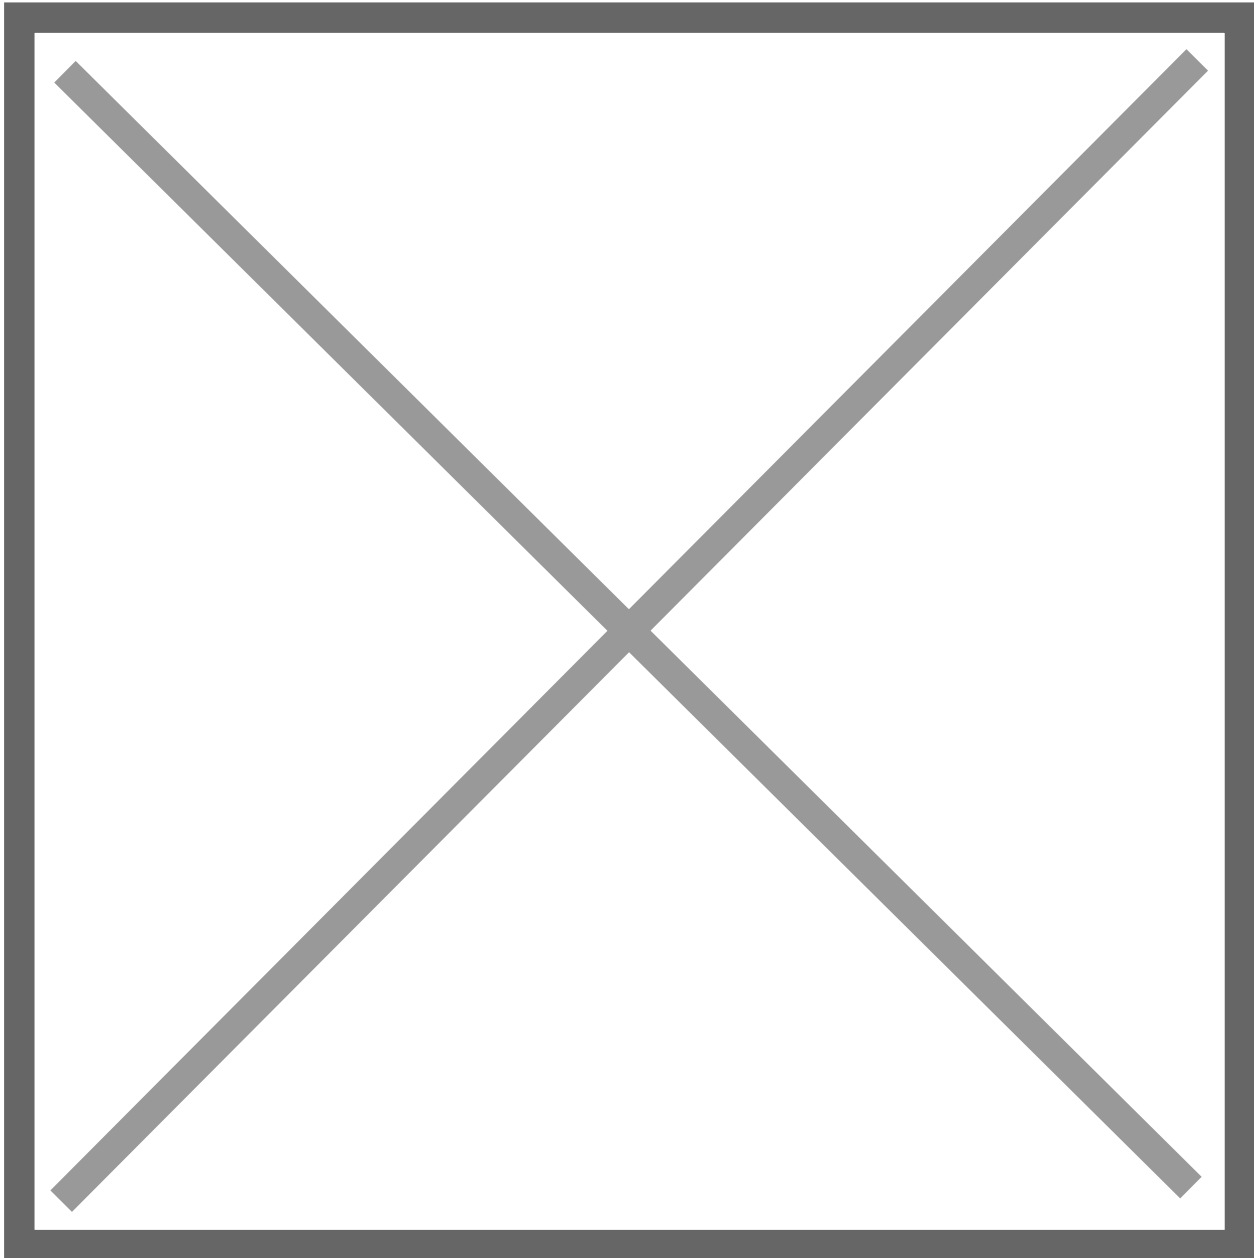

Get your codes from Ship logic website

The access key ID to be entered in the API key field

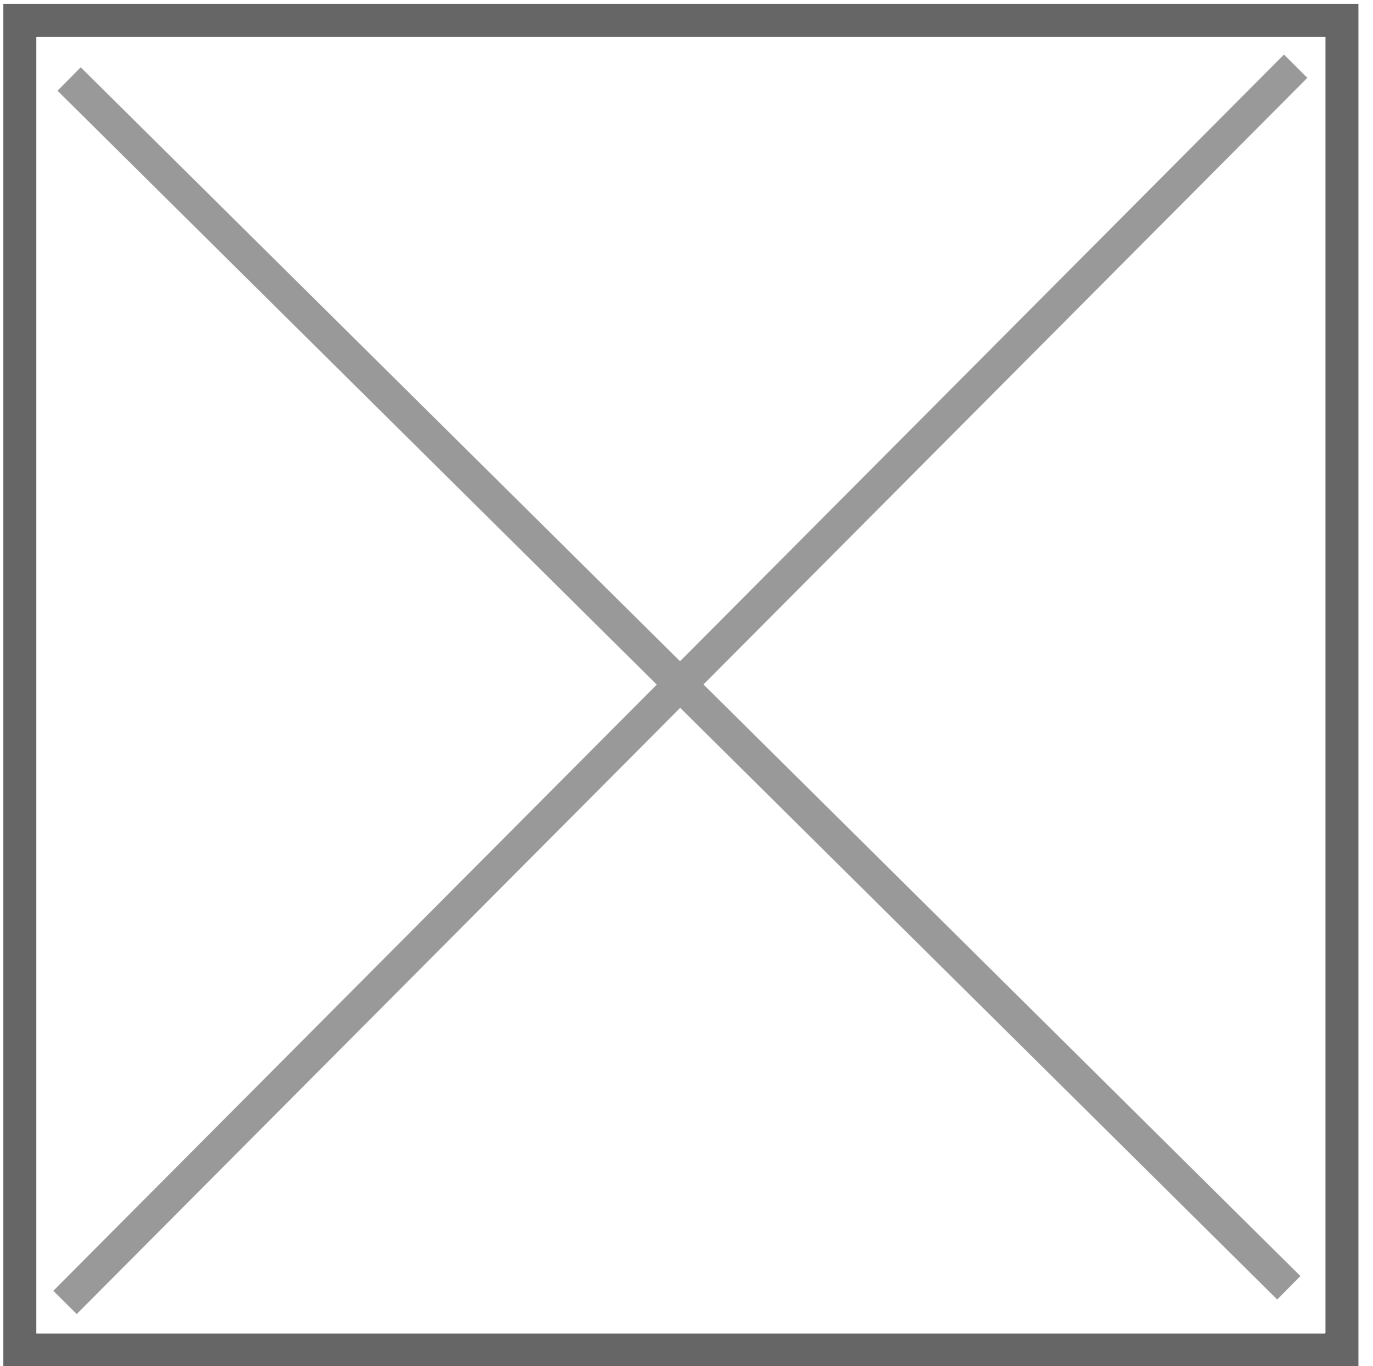

The secret access key to be entered in the password field

Enter your email address that you use to access the Ship logic website

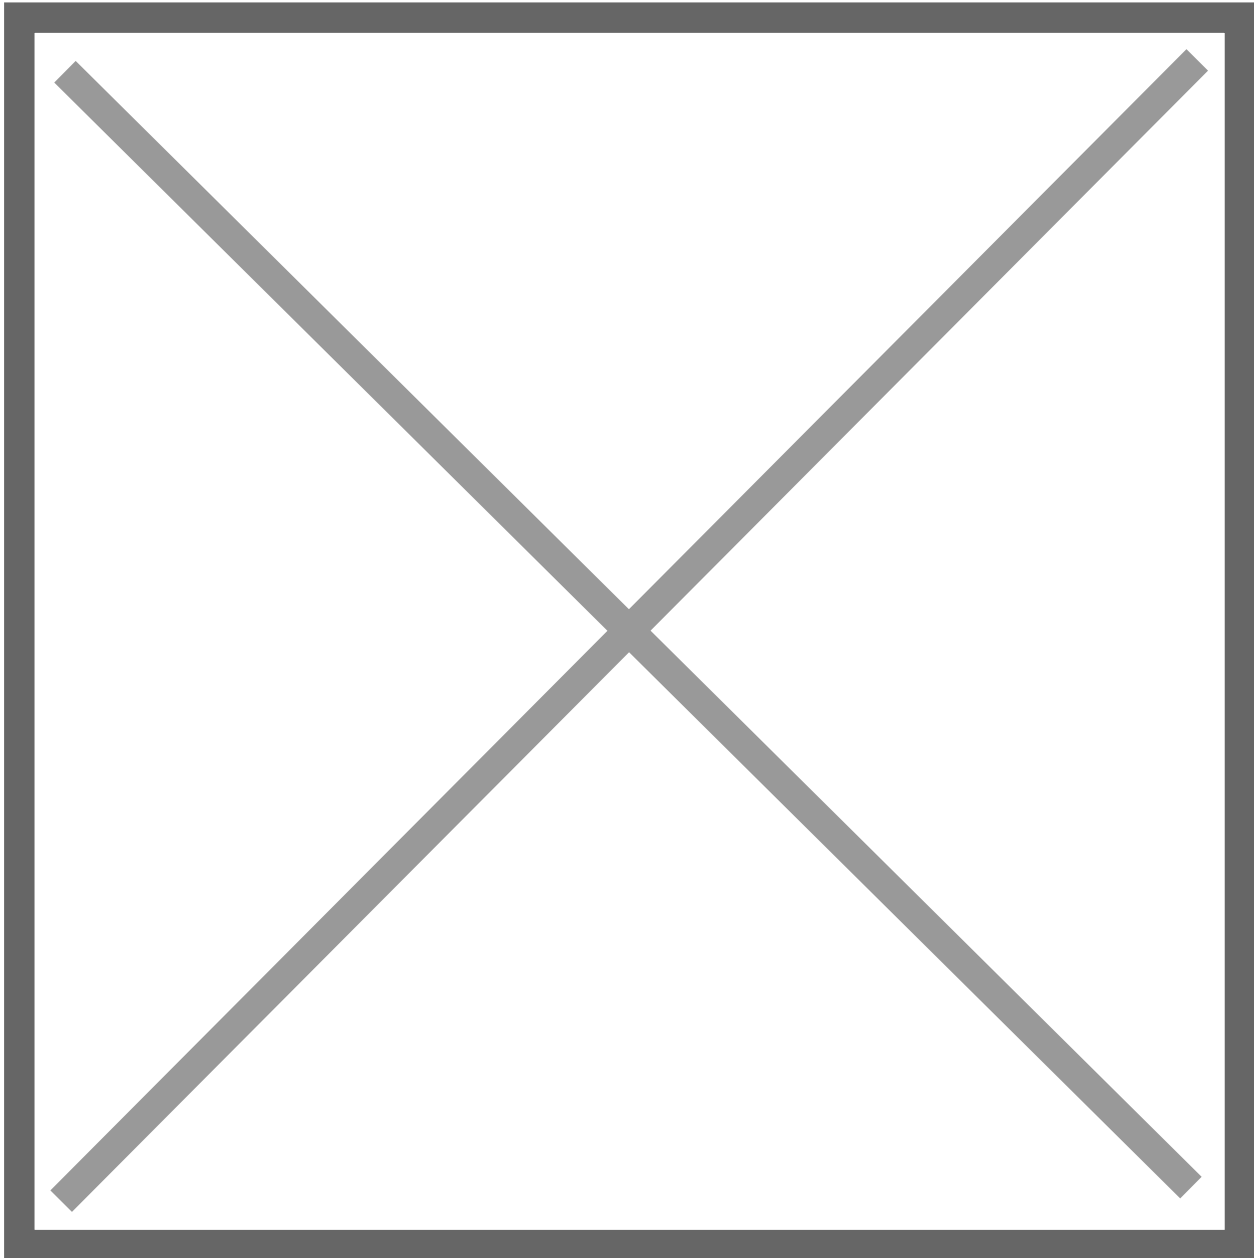

Go to Debtors / Creditors additional properties to setup shipping methods

This is where we link the courier supplier company to the delivery method

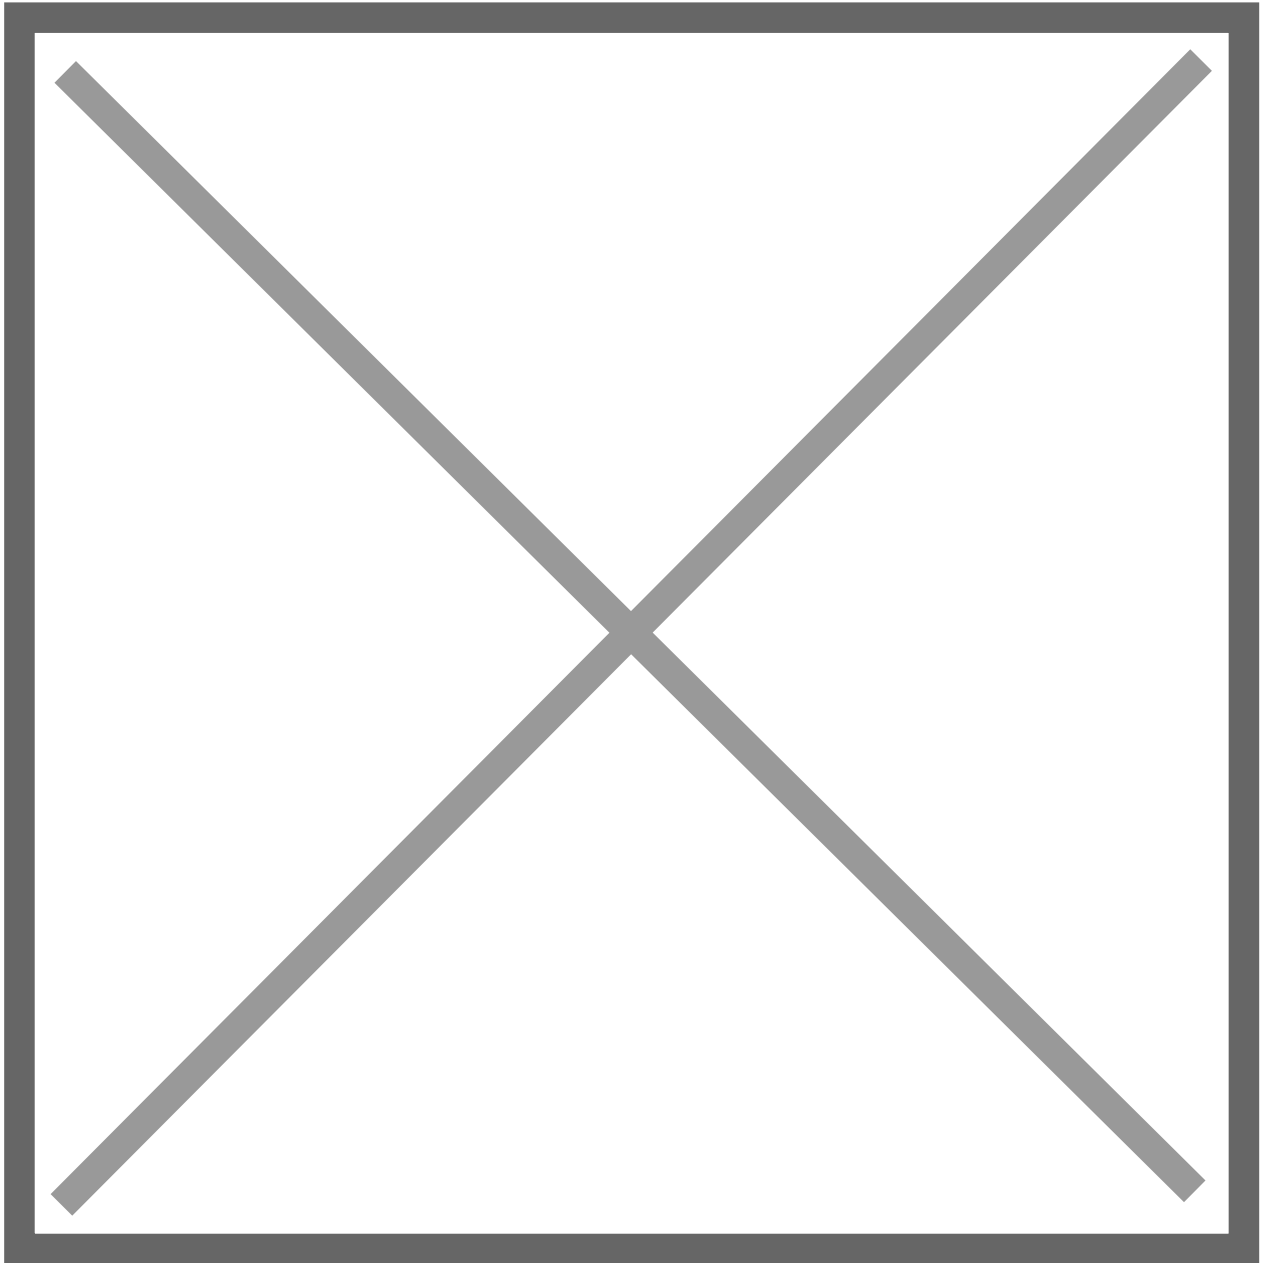

Go to the Creditors / supplier setup to link the supplier to the Courier API for Ship logic API

This will all integrate with the shipping information on the invoice
