

Shopify Setup

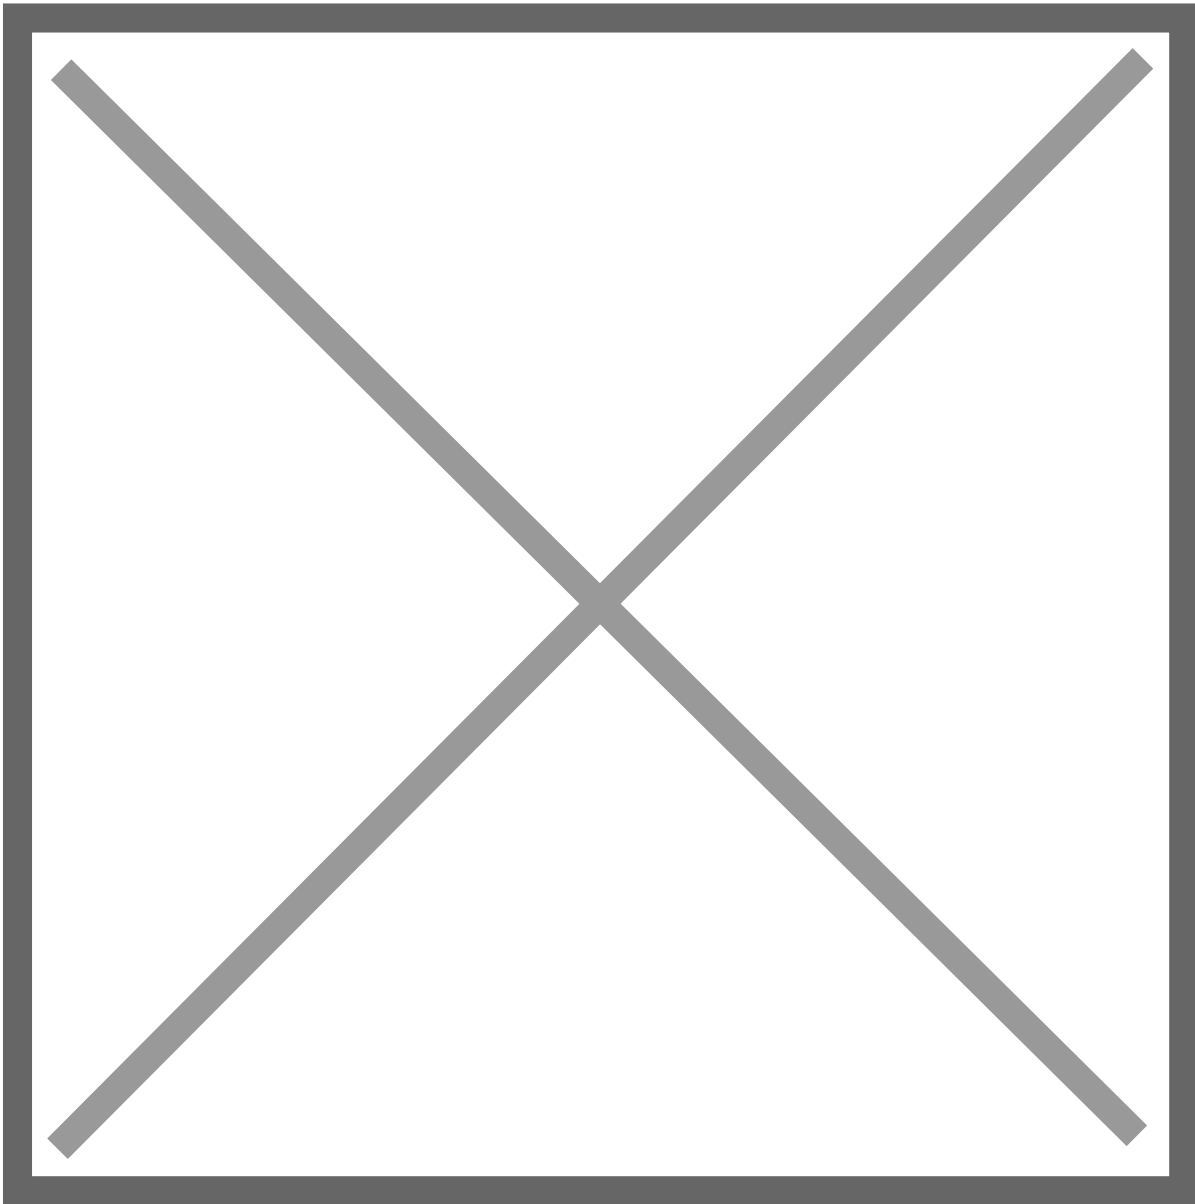

Scroll to the bottom of the page to find (Create Webhooks)

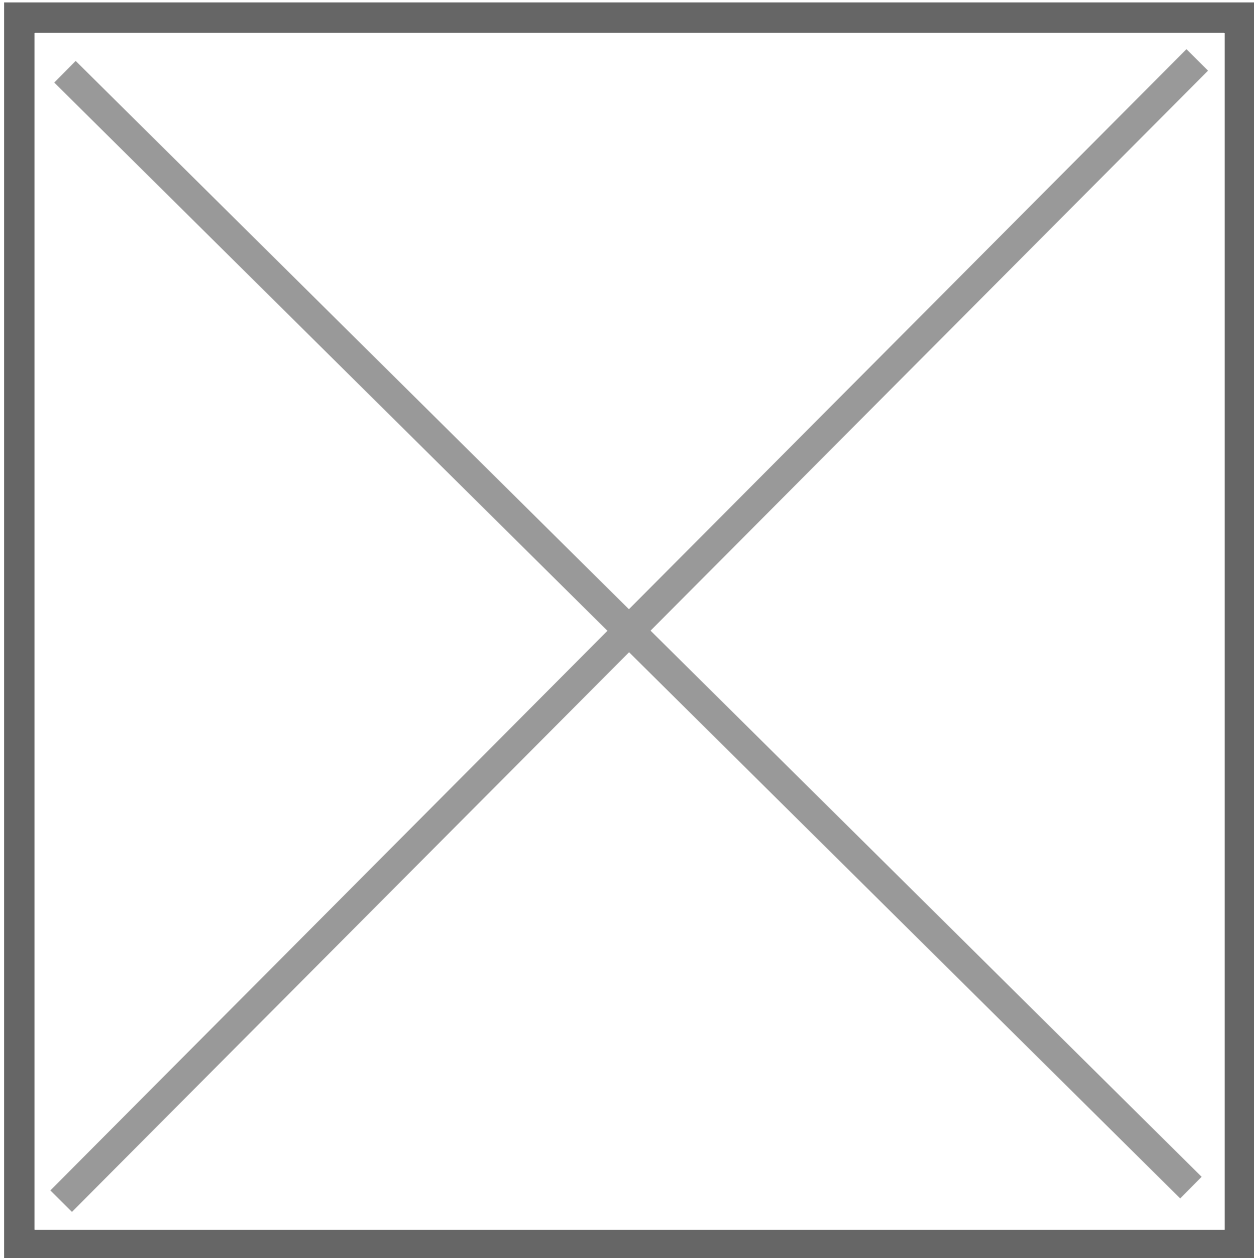

Select Order Creation

Enter this into the URL

https://SERVER_PATH/csp/NAMESPACE/api/shopify/orders/create

Once you have created the webhook, you will be given a verification code which needs to be setup in Webaccounting.

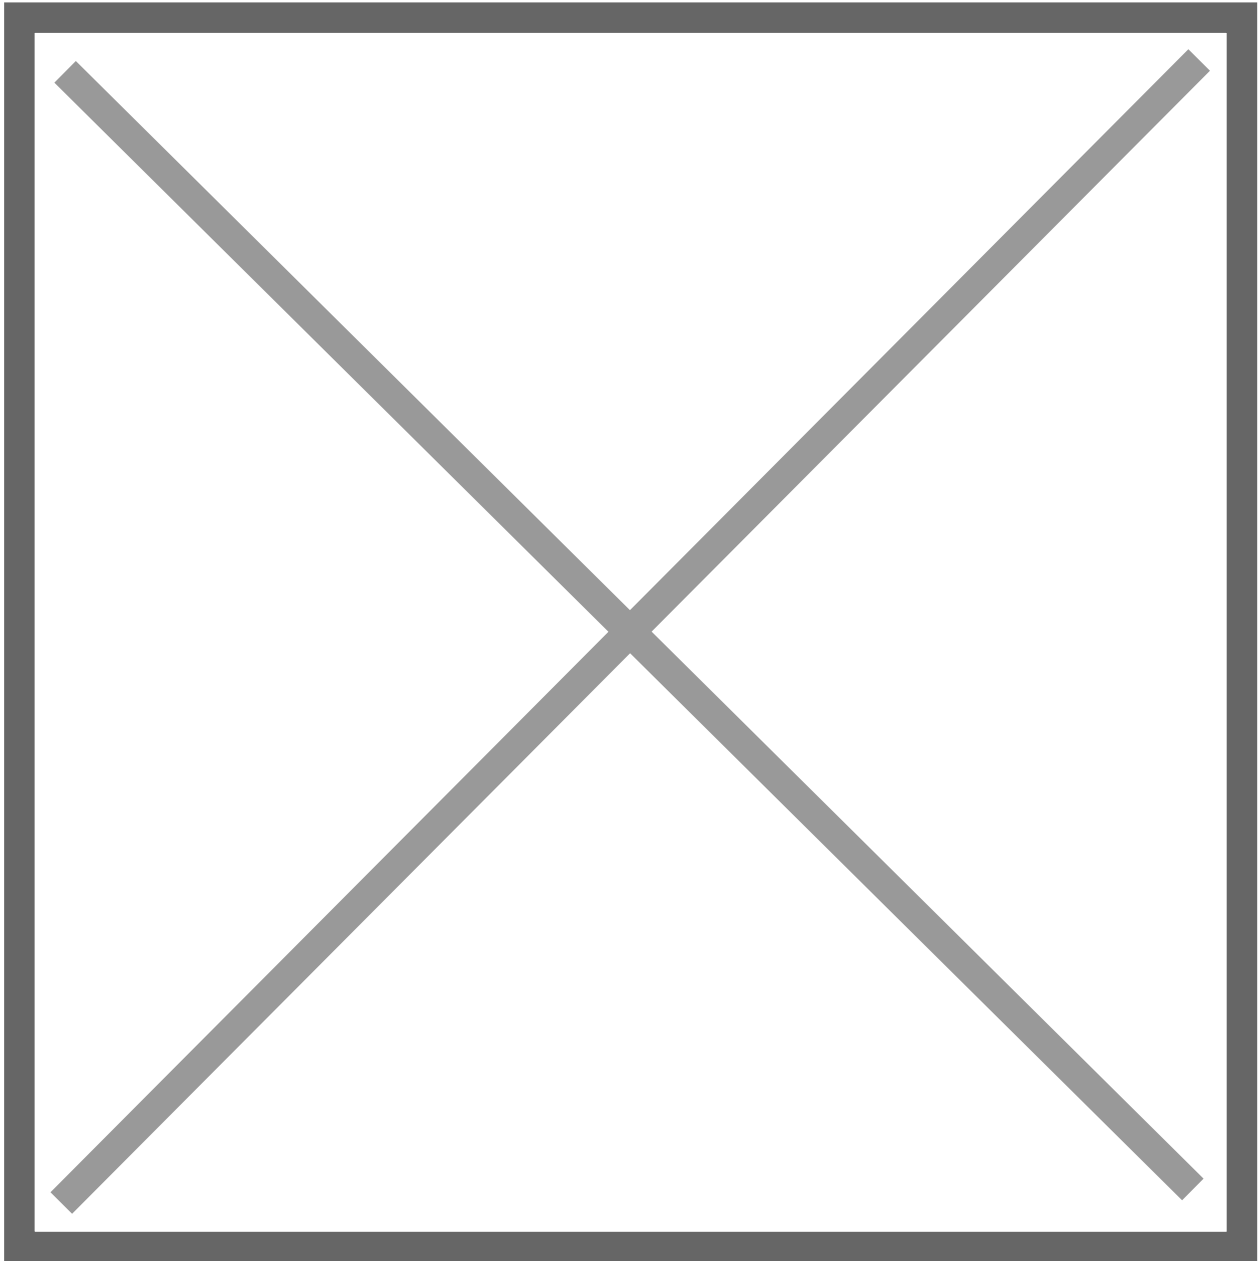

Go to the System > Configuration Module > Security > API Setup

Select Shopify Webhook for incoming orders from Shopify

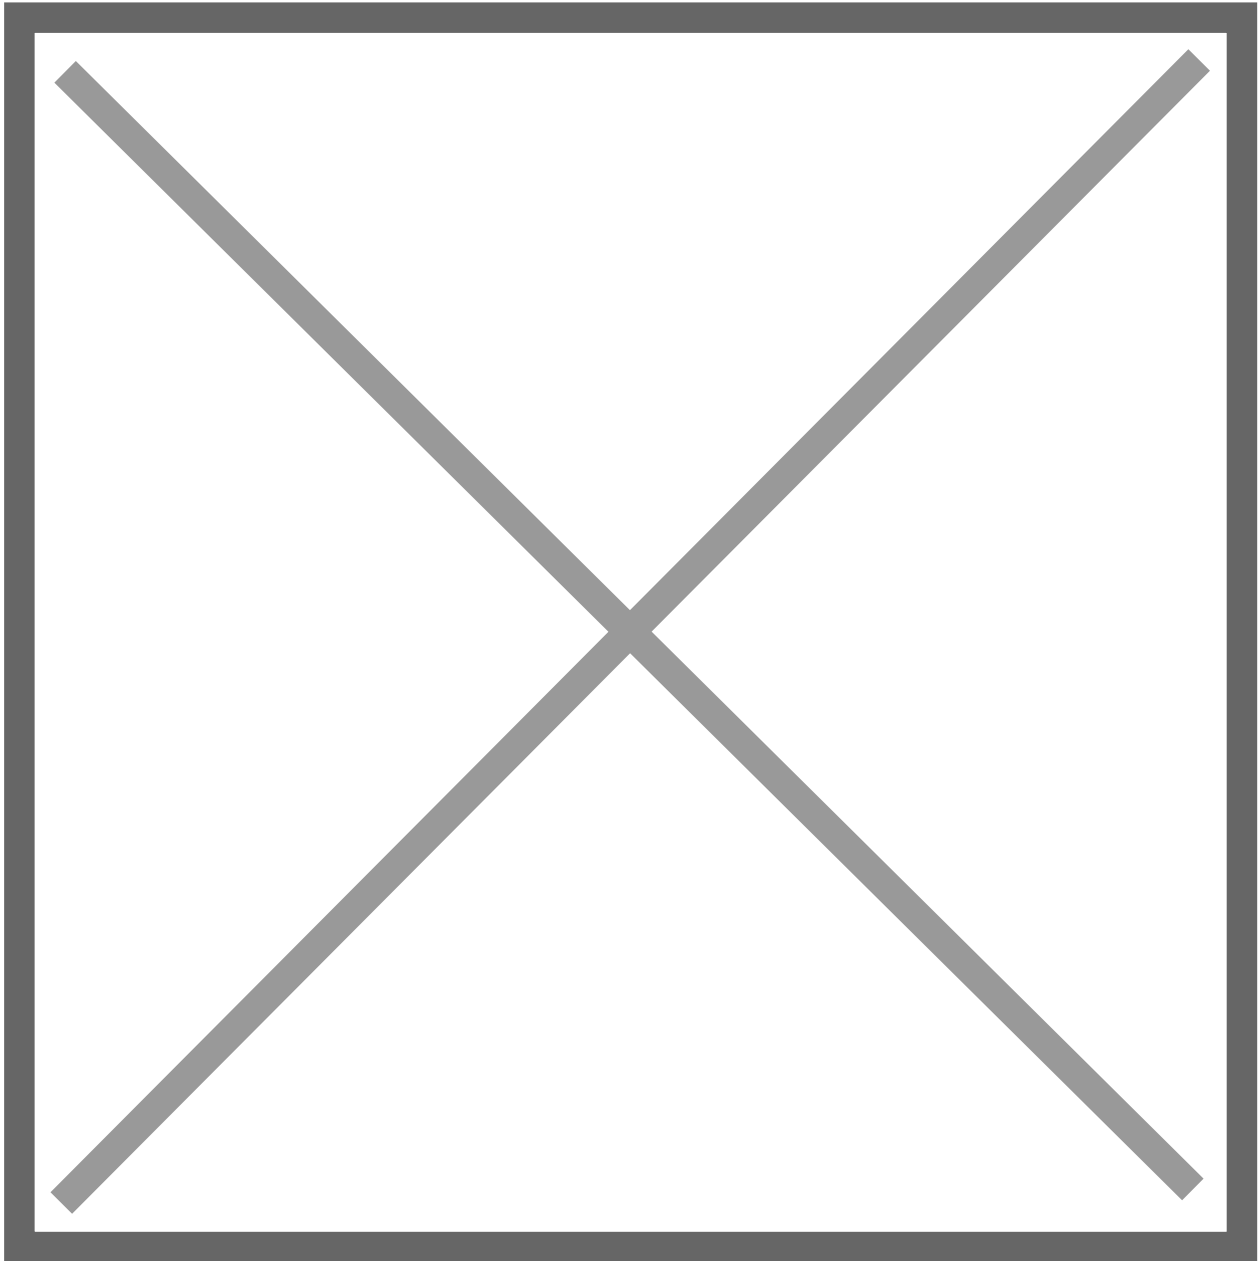

Paste the Webshop verification code into the password and save

Ensure the Active tick box is ticked

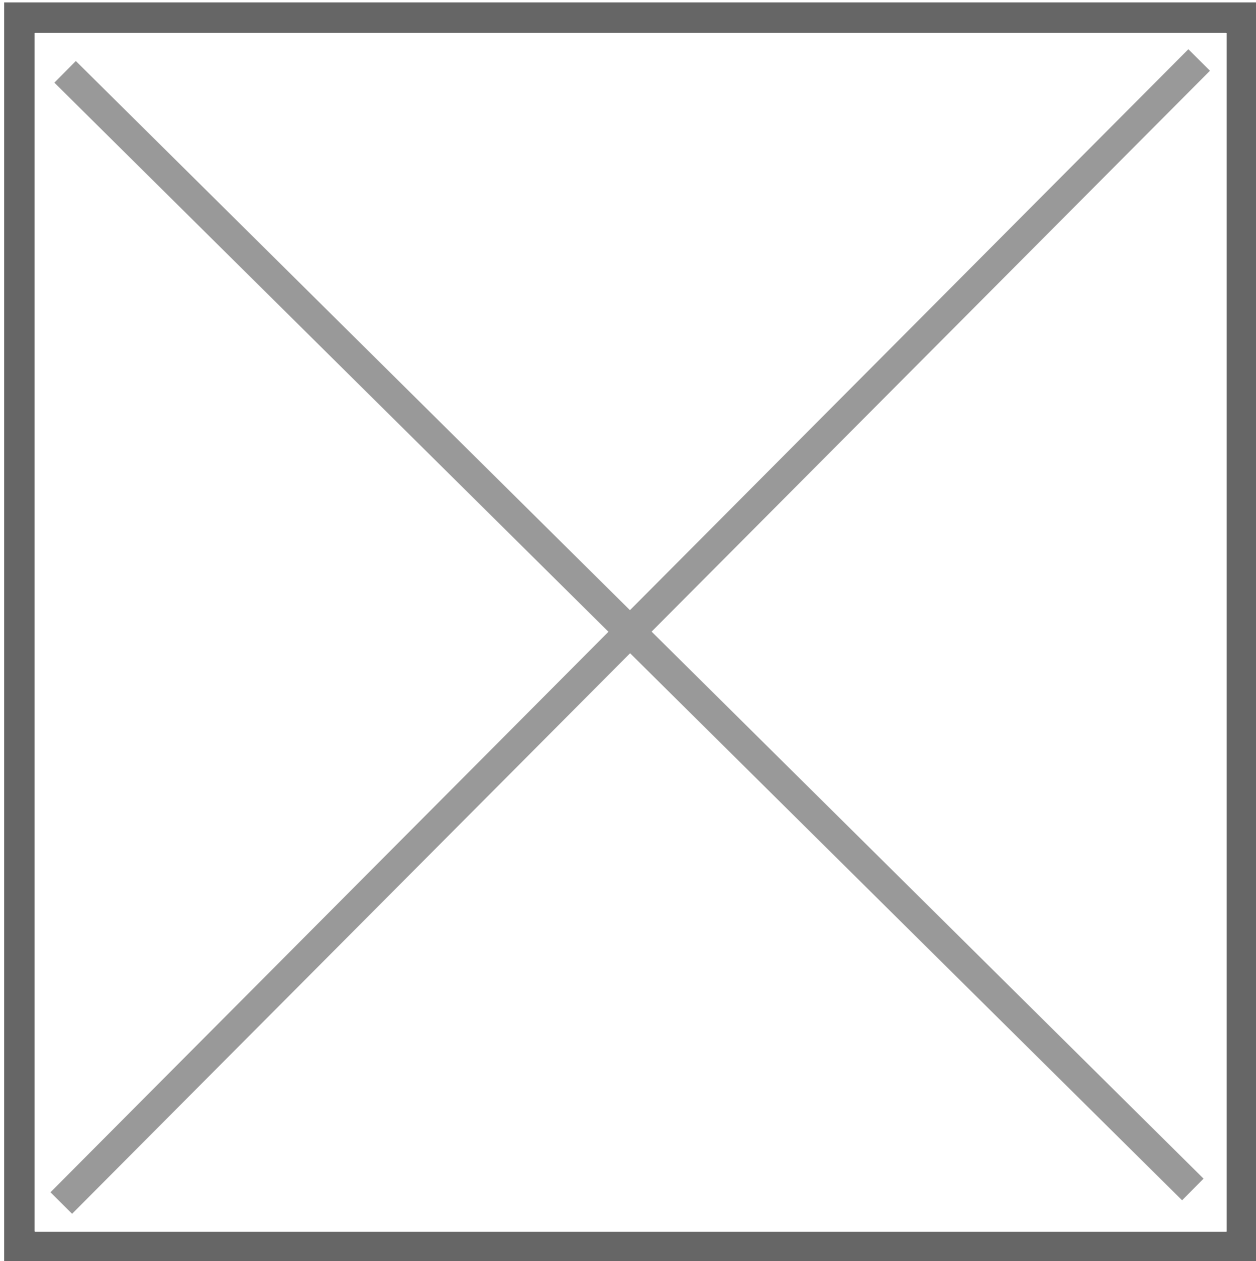

Now to setup the link from Webaccounting to Shopify

We have to get the username and password from Shopify

Click on Create new private app

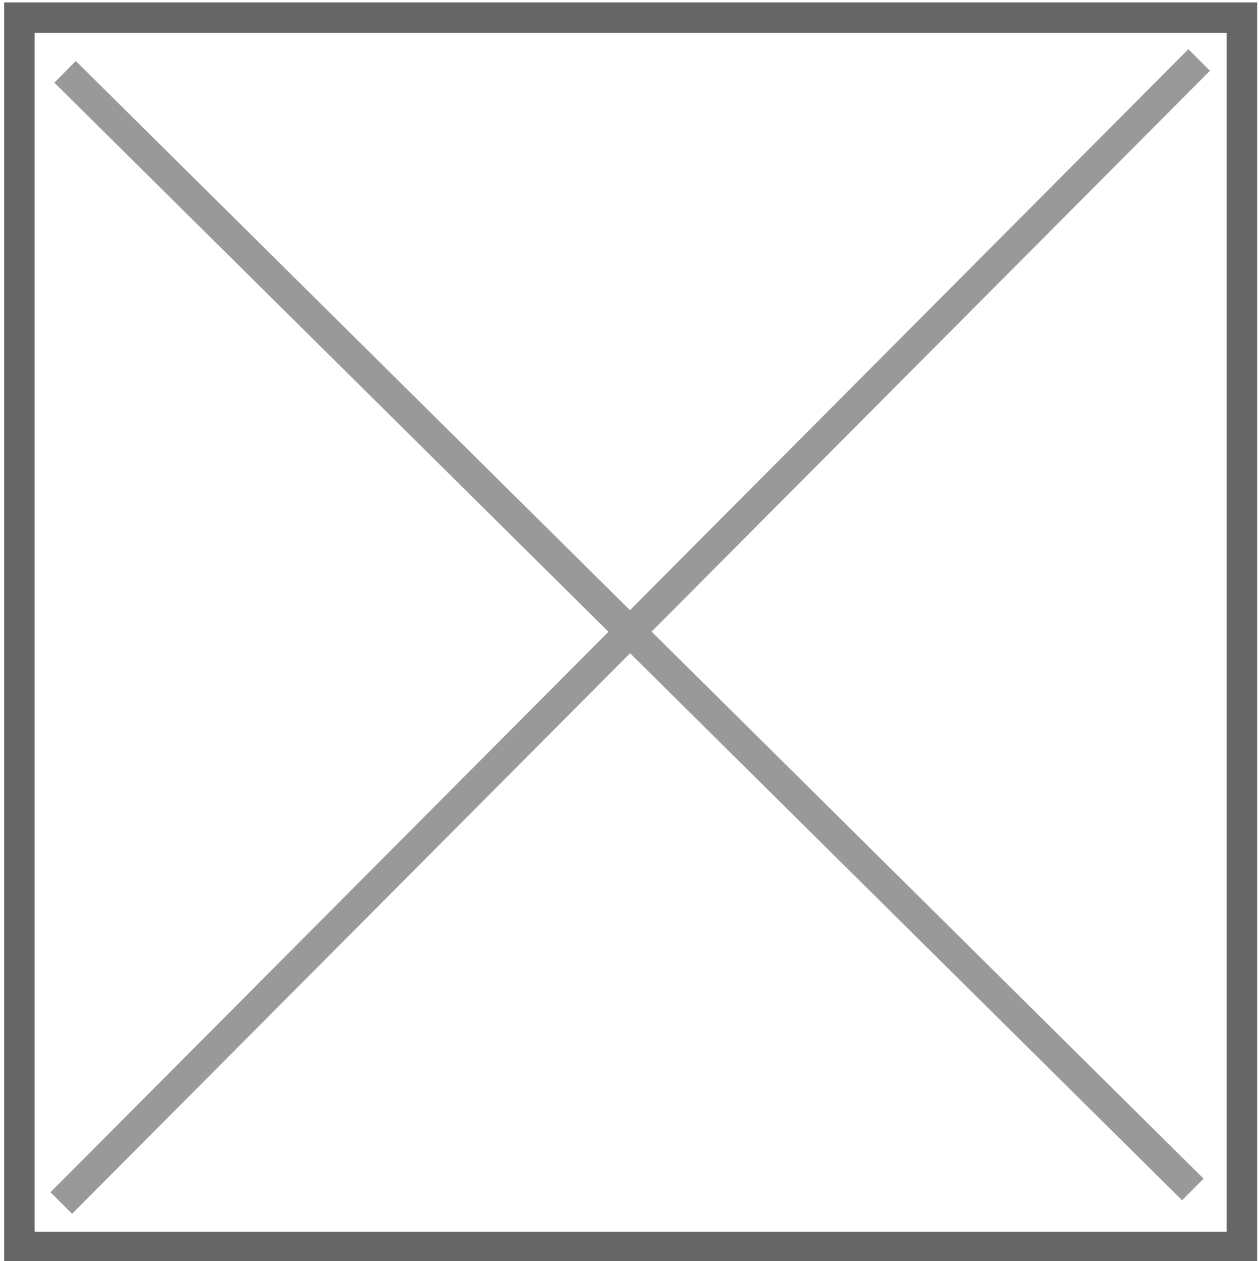

Enter the App name

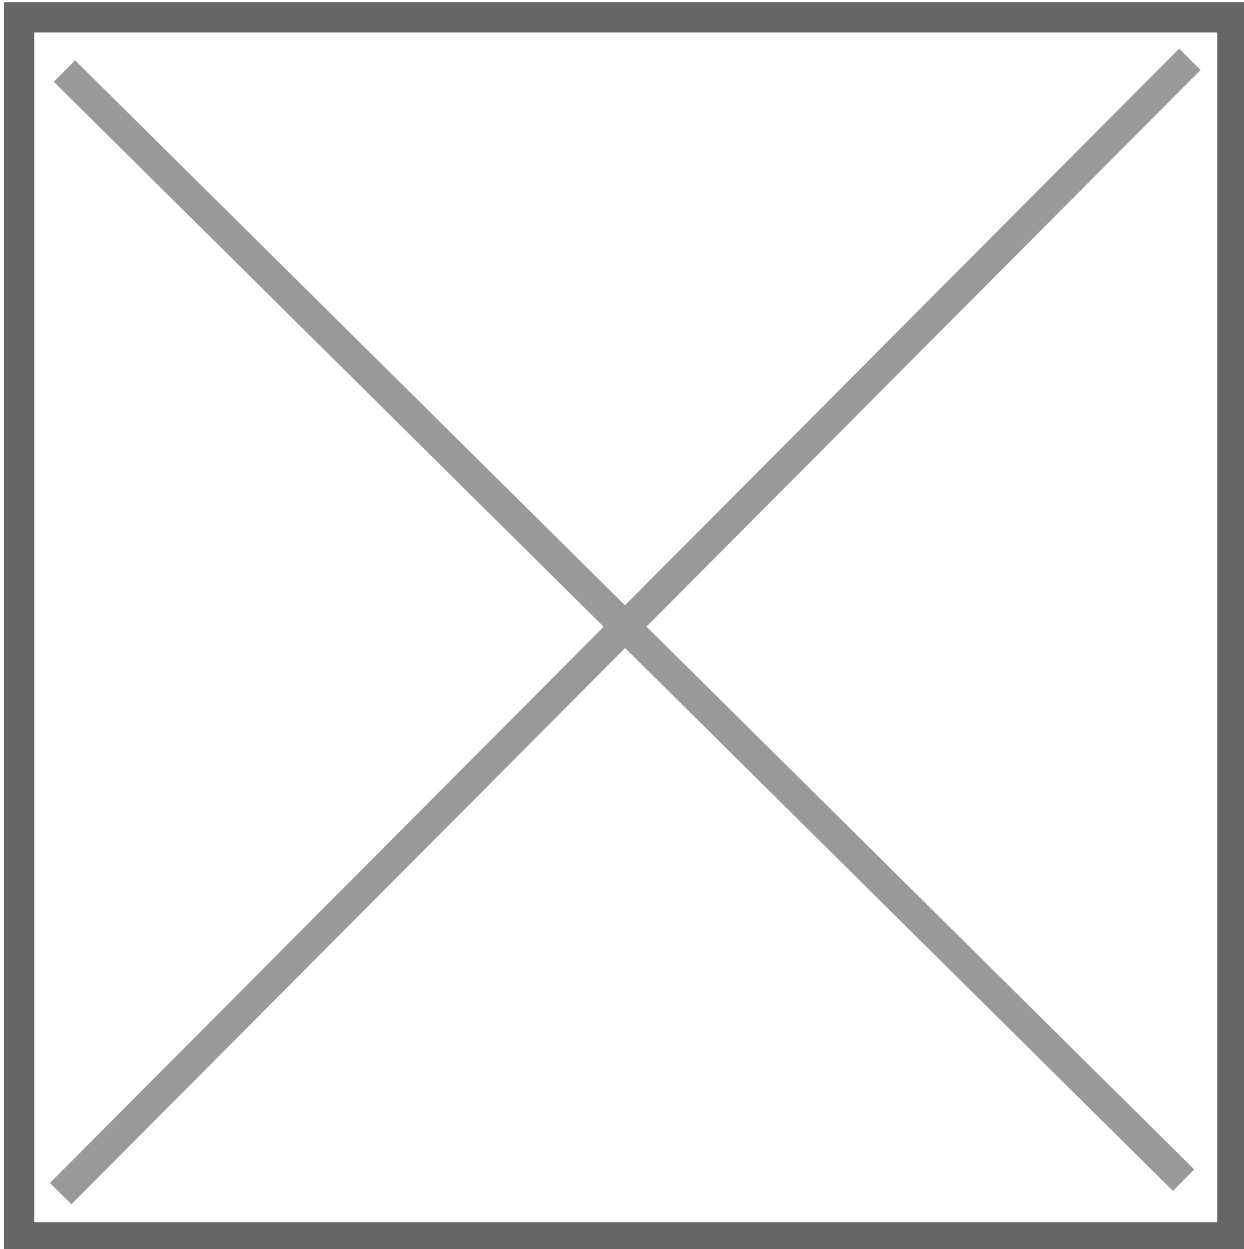

Enter the developer email address - peter@webaccounting.co.za

Select Products and change to Read and write

Open up inactive and find customers and change to read and write

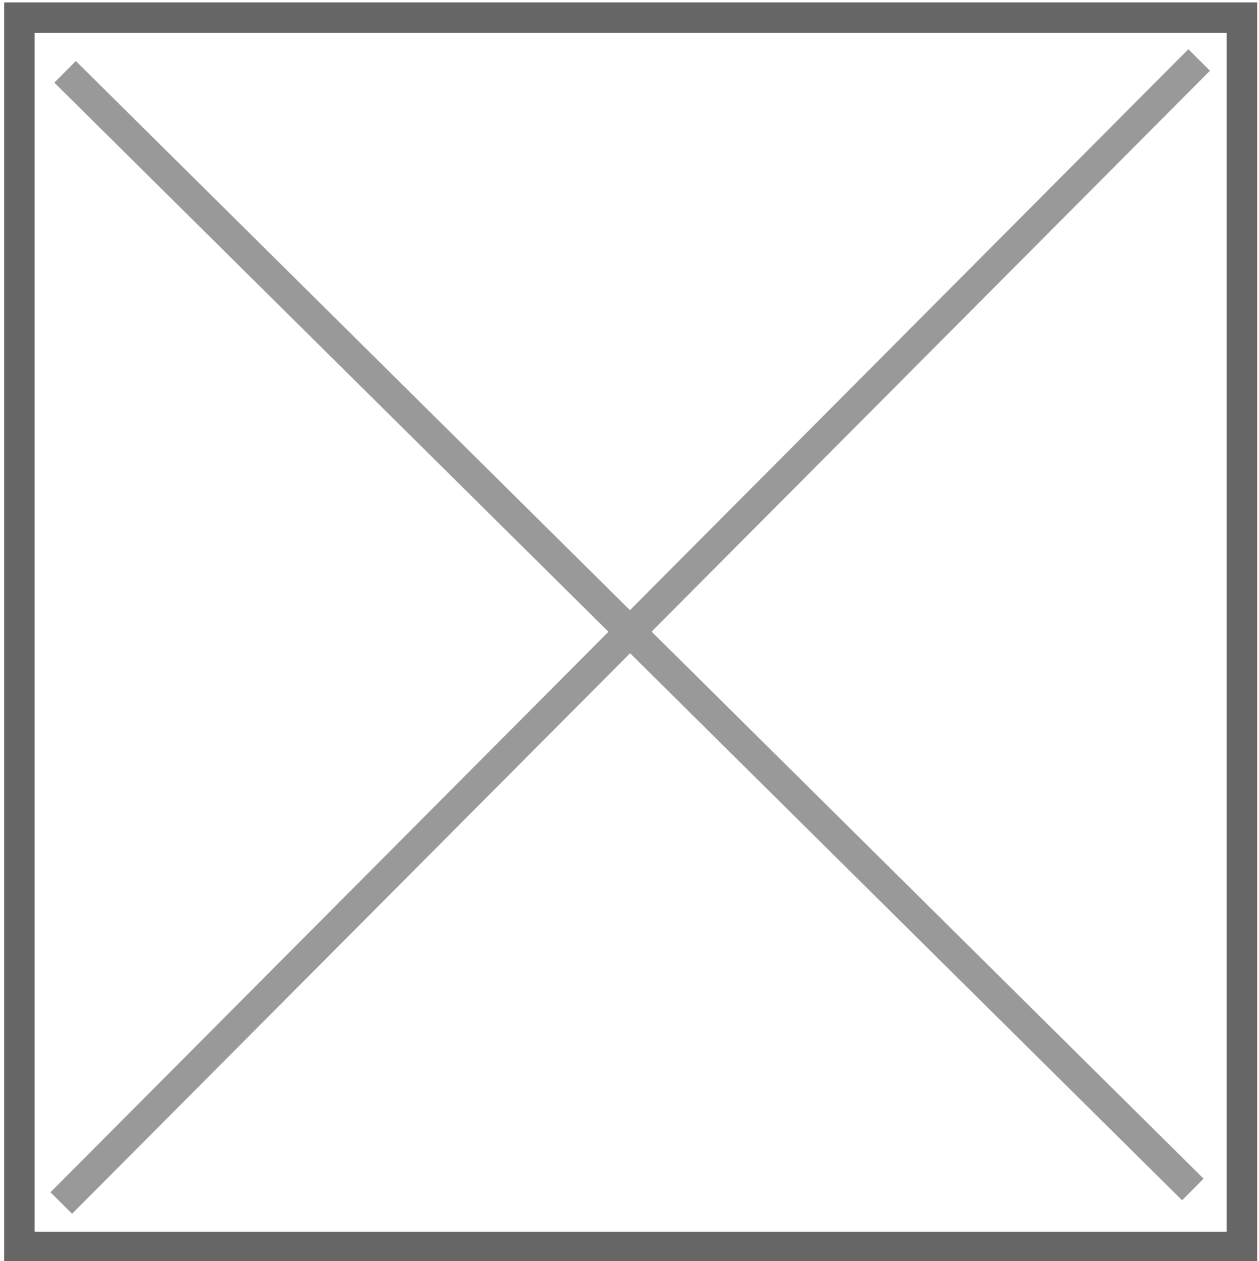

After you click save at the bottom of the screen, you will get a confirmation screen

After you have created the app, there will an API key and Password

You will need these two items for the Webaccounting setup

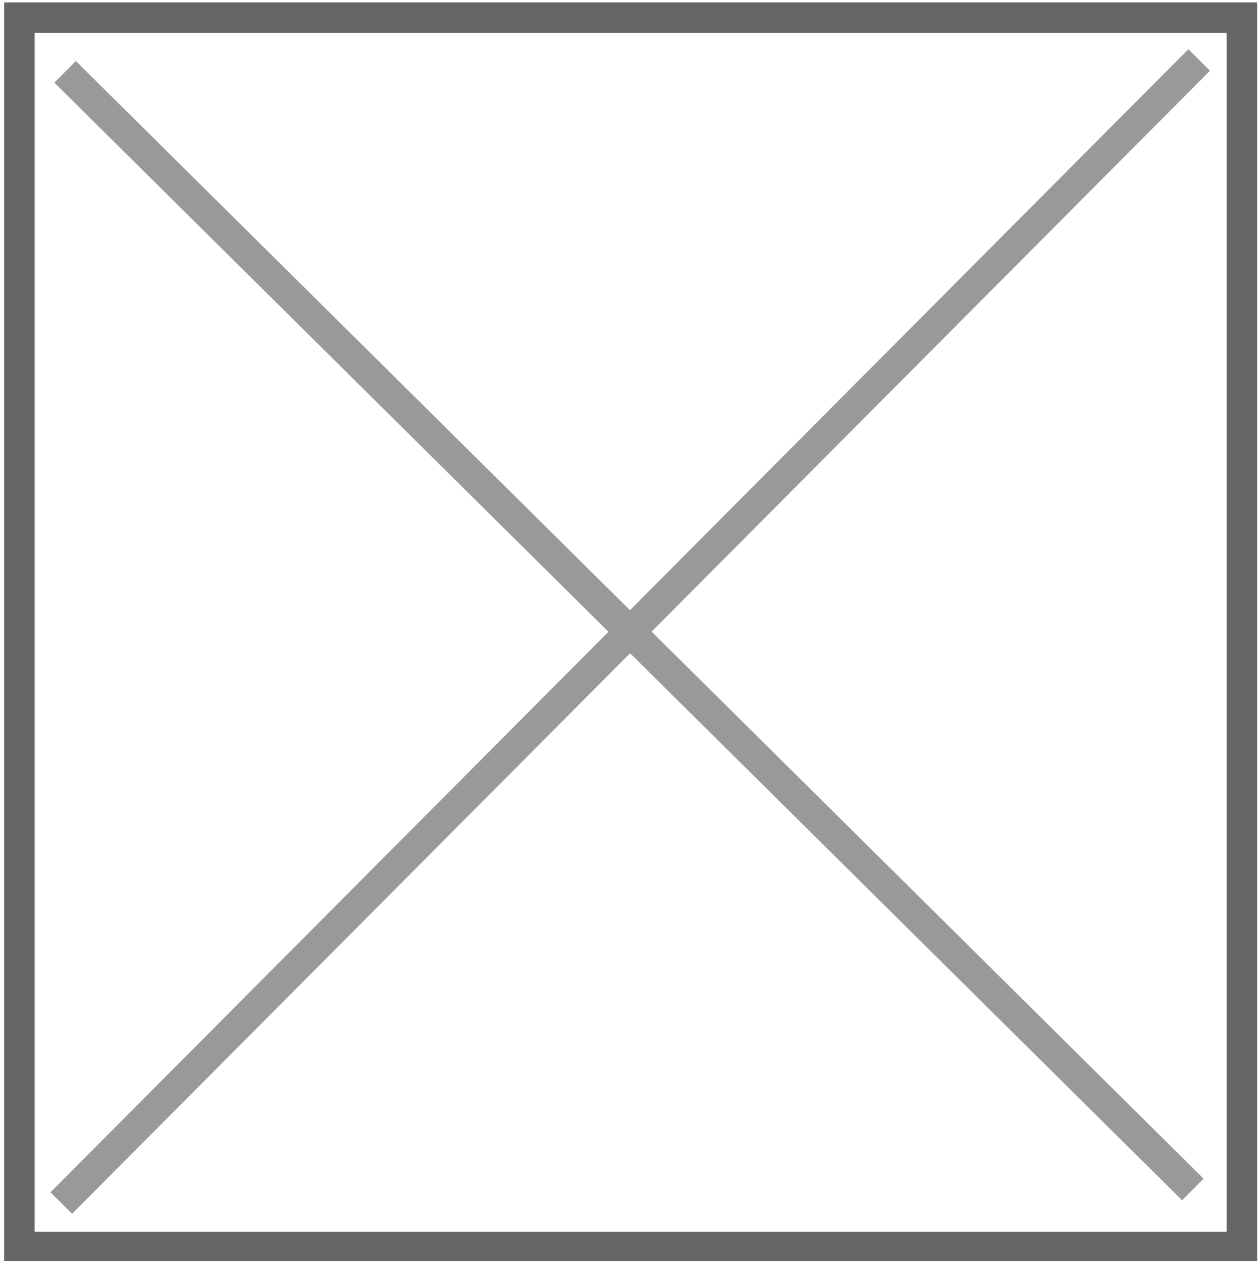

Setup the outgoing Webaccounting to Shopify integration

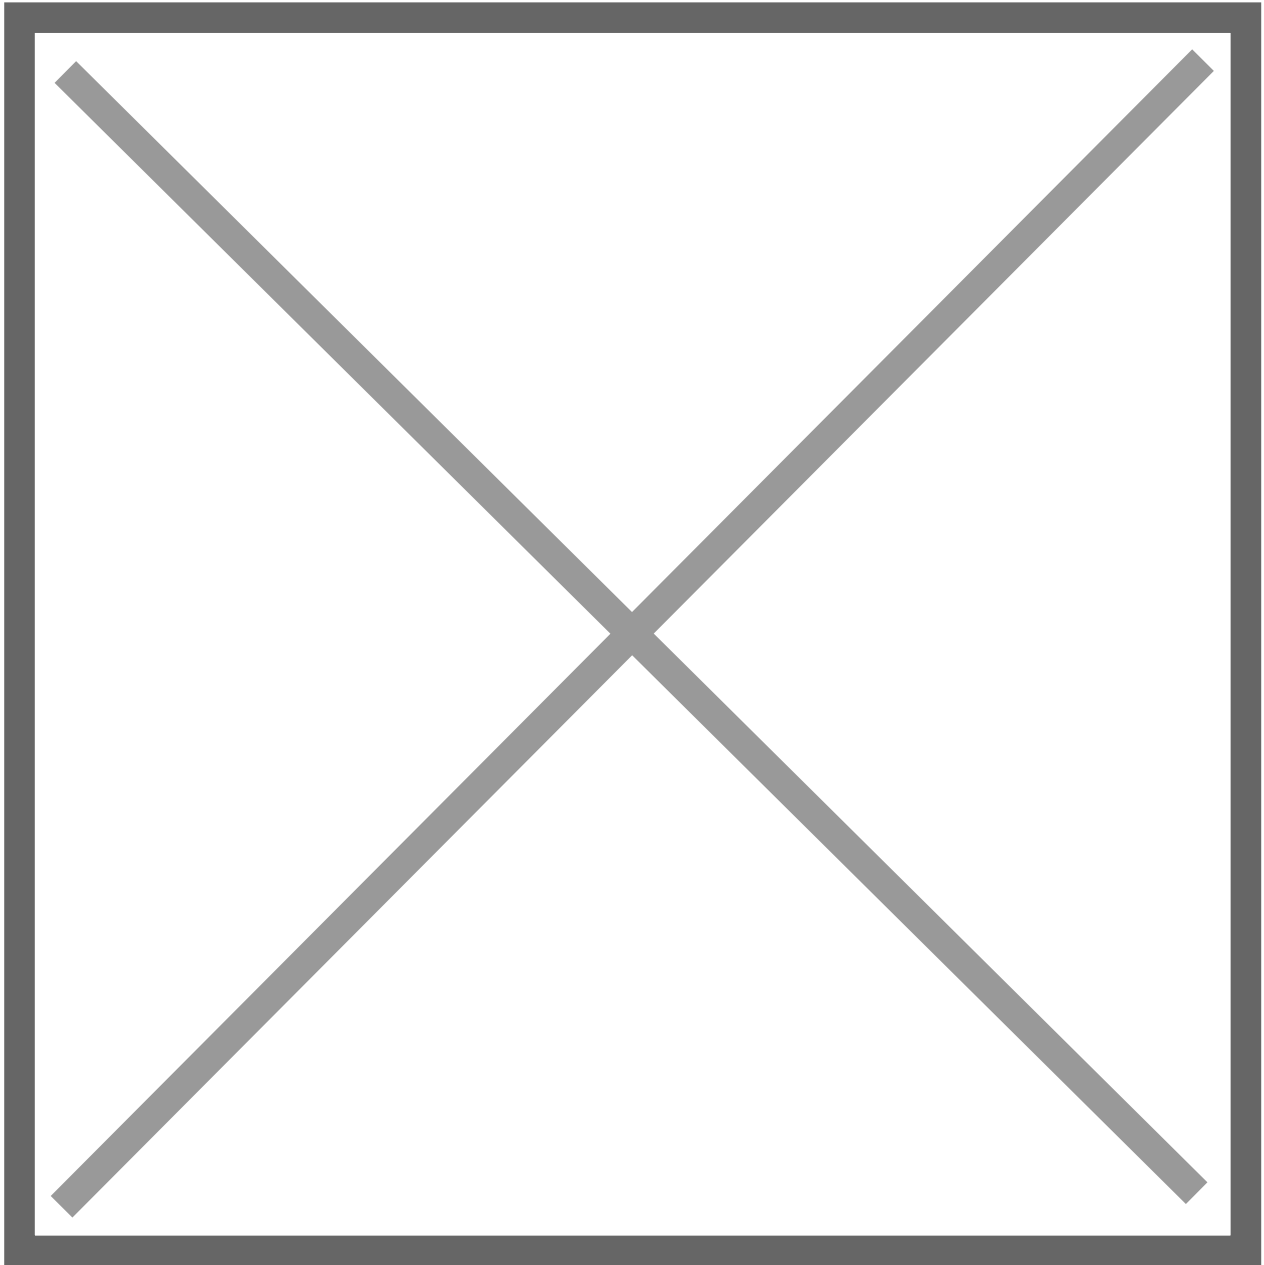

Select Shopify Admin API in dropdown

Put in your store URL

Put in your username and password from your Admin API private app that was setup

Go to the functions tab to enable the Debtors and inventory
