- [Asset Modules defined](#)
- [Asset Search](#)
- [Asset Actions](#)
- [Asset Audit](#)
- [Asset Scan Print](#)
- [Asset Tag and Add](#)

Asset Modules defined

The Asset Tracker has four modules

Asset Search	Search for Assets and view information on the asset
Asset Actions	Create an action on multiple assets
Asset Audit	Action a standard audit or blind audit on location
Asset Scan Print	Create an action on an asset by scanning the barcode. The system will automatically print the label of information of that asset Used in a manufacturing process

	Check Out		

Send To Server [2]

Issued By	The person who is issuing the action This can be a fixed field or activated for multiple users Multiple user is activated on security
Action	Select the action on the actions eg Check in or Check out etc
Issued To	Who are you issuing the assets to
Location	Where are the assets going to be located
Condition	What condition are the assets in
Return Date	An estimated return date
Description	Small description of the action on the assets
Batch No	Enter a batch number

Note: If you don't put anything into the Issue To, Location or Condition (eg they are left as Not selected) then the asset will retain its original log

Asset Audit

Create a Standard audit or blind audit

Asset Blind audit video (202401) - [Asset_Audit.mp4](#)

Asset Results (202401) - [Asset_Audit_Results.mp4](#)

Standard Audit	Standard audit is green Standard Audit allows one to view items in location Once scanned the list is reduced
Blind Audit	Blind audit is blue Does not show assets at location Only shows items that are scanned in audit

Note: to limit the user from seeing the standard Audit, setup in security

Icons defined

	Full item details on grid
	Compact grid view
	Fetch information on the current asset which is not part of the current audit location. Information updated on which location it is from, assigned to and condition. It checks whether this asset exists in the system
	Scanned items are hidden
	Scanned items can be viewed in list Scanned items are marked with a green dot to show it is valid
	Blue icon - item in audit, but not scanned
	Green icon - Item scanned in audit and is found and valid

Activating an Audit

Once all basic information has been filled in

Audit	Full (Default) or Part audit
Type	Standard or Blind audit
Description	Default description which can be overridden
Location	The location of the audit
Unassigned Location	The location that assets will be moved to that have not been audited
Action	The action assigned to the audit

Buttons defined

In order to start the audit, the basic information must be filled in.

Then click on the blue start button to activate the audit

Start Audit	Start the audit
Cancel Audit	Cancel the current
Complete Audit	Complete the audit and update the assets that an audit was done

Note: A new audit cannot be created until the audit is complete or Canceled

Full and Part Audit

Full Audit	Full Audit will audit all items within the location, any items that are not audited will be moved to the Unassigned location
Part Audit	Part Audit allows one to add assets found after an audit is done. This will still show all assets within the location audit, but only add the additional assets to the Audit Location. All other assets not counted will remain in the Location.
