

ScanSKU Scanner R-Series

Scan setup

Scanner setup

Setting the Output mode from the Scan app

For scanned data to be successfully entered into a selected input field without the onscreen keyboard needing to be shown the Output Mode setting needs to be changed to "Keyboard Mode" in the Scan App:

Open the Scan app

[image.png](#)

Tap Settings

[image.png](#)

Scroll down and tap Output Mode

[image.png](#)

Select Keyboard Mode

[image.png](#)

Onscreen Keyboard

To toggle the onscreen keyboard in Webatar

For the panels or screens listed below, with the exception of the Pick Sales Order screen, there should be a keyboard icon in the title bar as shown in the first screenshot. When the keyboard icon

is tapped the input fields used for scanning in the screen will either be prevented from automatically showing the onscreen keyboard when focused, or allowed to show it. The active state is reflected by the tick or cross icon next to the keyboard icon.

Currently, for the Pick Sales screen this option is presented as a toggle in the options menu, accessible by tapping on the vertical dots icon in the title bar, as shown in the second screenshot.

Item Scan List Panels with disable onscreen keyboard option available

- Stock Transfer
- Asset Audit
- Stock Count
- Quick Sales
- Barcode Count
- Asset Actions
- Asset Scan Print
- Purchase Order
- Pick Sales Order*
