

Export file

Video manual 2020 - [Click Here](#)

When you export the file, you will get a file with the following format:

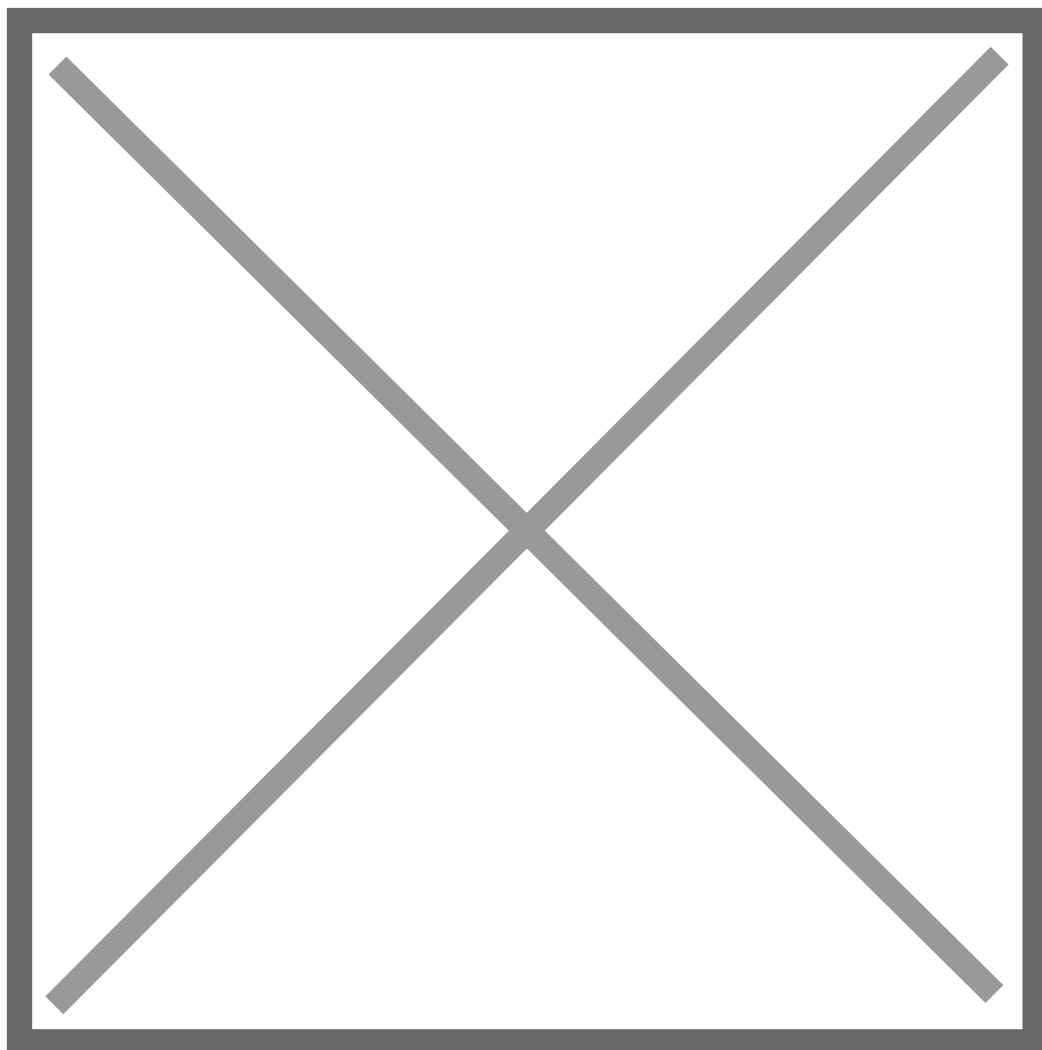

Only material changes on the Stock Take Quantity.

Then import the file and do a spot check on the quantities changed.

Note:

Remember that the exported file is NOT sorting by stock code or description, it is easier to sort by stock code and then once capturing has completed to sort BACK by ID code, as this is what the import file will look at.
