

# Stock Recovered Costs

Stock recovered costs are created from stock items that cannot be un managed from the job.

The stock item will be returned back on job via a stock level adjustment.

The value of the stock item will be added to the job as a custom item called stock recovered costs.

The quantity will be the same as the quantity of stock returned as a postive figure.

The value of the stock item will be the recovered cost on the job as a negative value.

See [stock request return to job](#) processes under inventory module
