

Unmanage All Job Lines

The “**Unmanage All**” function will reverse any managed quantities on job lines, reducing them back to an unmanaged state based on what has not yet been invoiced.

- Any quantities already **invoiced cannot be unmanaged**, as they are finalised in the system
- Only **non-invoiced quantities** will be adjusted

To fully remove or reset job lines, use the available actions provided below in combination.

A	UnManage All items on a job
B	Clear Line History Only works if the Managed Actual quantity equals zero
C	Delete Job Line Only works if there are no Line History entries

Actions can be applied to either **selected lines** or **all lines within the grid**.

- **All Lines in Grid** – This option will apply the action only to the lines currently visible, based on the applied filters
- If a line cannot be processed (e.g. due to system restrictions), it will be **skipped automatically**, and the action will continue on the remaining lines

This ensures efficient processing without interruption when working with multiple job lines.
