

Asset Additional Information Report

CRM> Reports> Report List

This report generates details prior to asset details in terms of what has been implemented on the generic branch table located in system configuration.

The form generates details which are depicted in the table found in system config example make, brand, track it number, serial no, etc.

A list of all items linked to the customer will be generated with the asset item number assigned to each item.

The screenshot shows a software window titled "Asset Report" with a blue header bar containing a close button (X) and two icons (a gear and a question mark). Below the header, there are two input fields: "Customer:" and "Asset:", each followed by a white text box and a dropdown arrow. At the bottom of the window, there are two buttons: "Generate" and "Close".
