

# Production Tracking (PT) map

The **Production Tracking (PT) Module** is used to configure, record, search, analyse, and report on production tracking activities linked to job items. The module is divided into four main menu groups: **Configuration**, **Activity**, **Analysis**, and **Reports**, allowing users to manage production setup, track job item activity, review action history, and access production tracking reports.

## Production Tracking (PT) Module

### Configuration

| Menu Item | Description                                                                                                                   |
|-----------|-------------------------------------------------------------------------------------------------------------------------------|
| PT Action | Create and maintain the production tracking actions that can be recorded against job items throughout the production process. |
| PT Groups | Define and manage production tracking groups used to categorise production activities and workflows.                          |

| Menu Item                   | Description                                                                                                                                  |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PT Location</b>          | Maintain the production locations, departments, or work centres where production activities are performed.                                   |
| <b>PT Location Planning</b> | Configure location-based production planning to assist with scheduling and monitoring production progress. Set milestones and email updates. |
| <b>PT Quality Control</b>   | Set up quality control requirements and checkpoints used throughout the production process.                                                  |
| <b>PT Issued To User</b>    | Maintain user assignments and responsibilities for production tracking activities and tasks.                                                 |

---

## Activity

| Menu Item                 | Description                                                                                                               |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <b>PT Job Item Search</b> | Search for job items and review their associated production tracking information, progress, planning, and current status. |

---

## Analysis

| Menu Item                      | Description                                                                                                                           |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <b>Job Item Action History</b> | Review the complete history of production actions recorded against a job item, providing a full audit trail of activity and progress. |

---

## Reports

| Menu Item          | Description                                                                                                                         |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <b>Report List</b> | Access and generate production tracking reports for analysing production activity, progress, planning, and operational performance. |

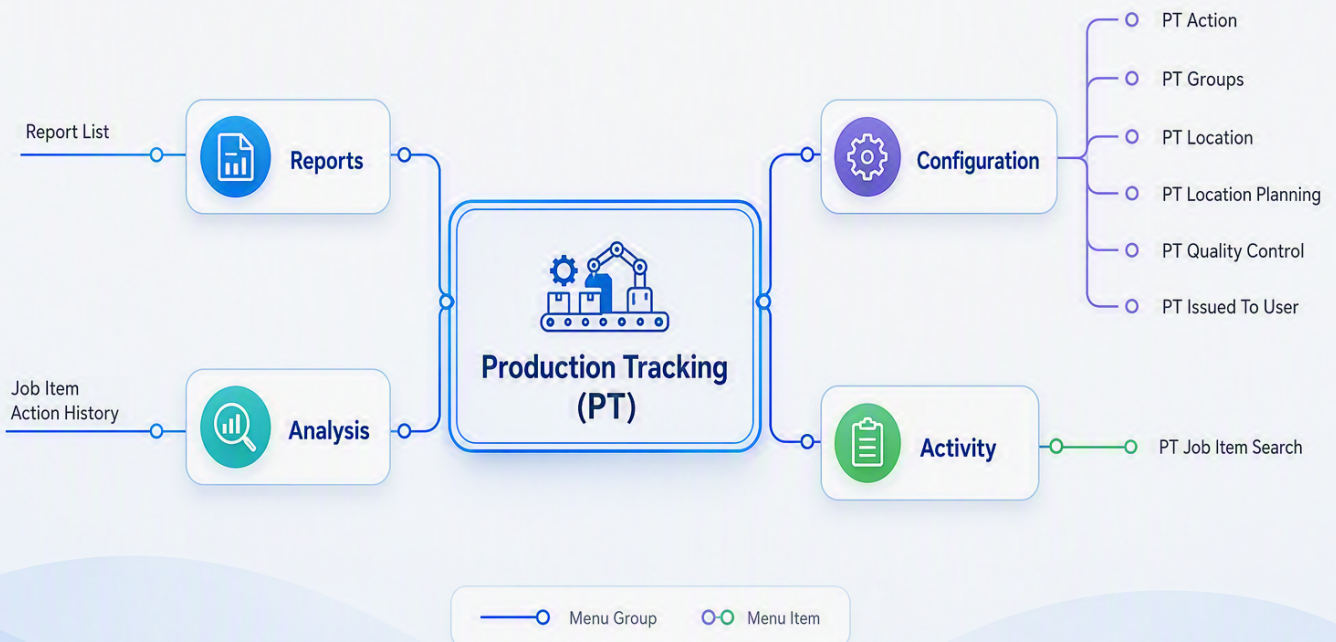

---

## Module Summary

The **Production Tracking (PT) Module** enables organisations to monitor and manage production processes against job items. Users can configure production actions, locations, planning requirements, and quality controls, track production activity in real time, analyse job item histories, and generate reports to measure production performance and progress.
