

Time Tracker Exports

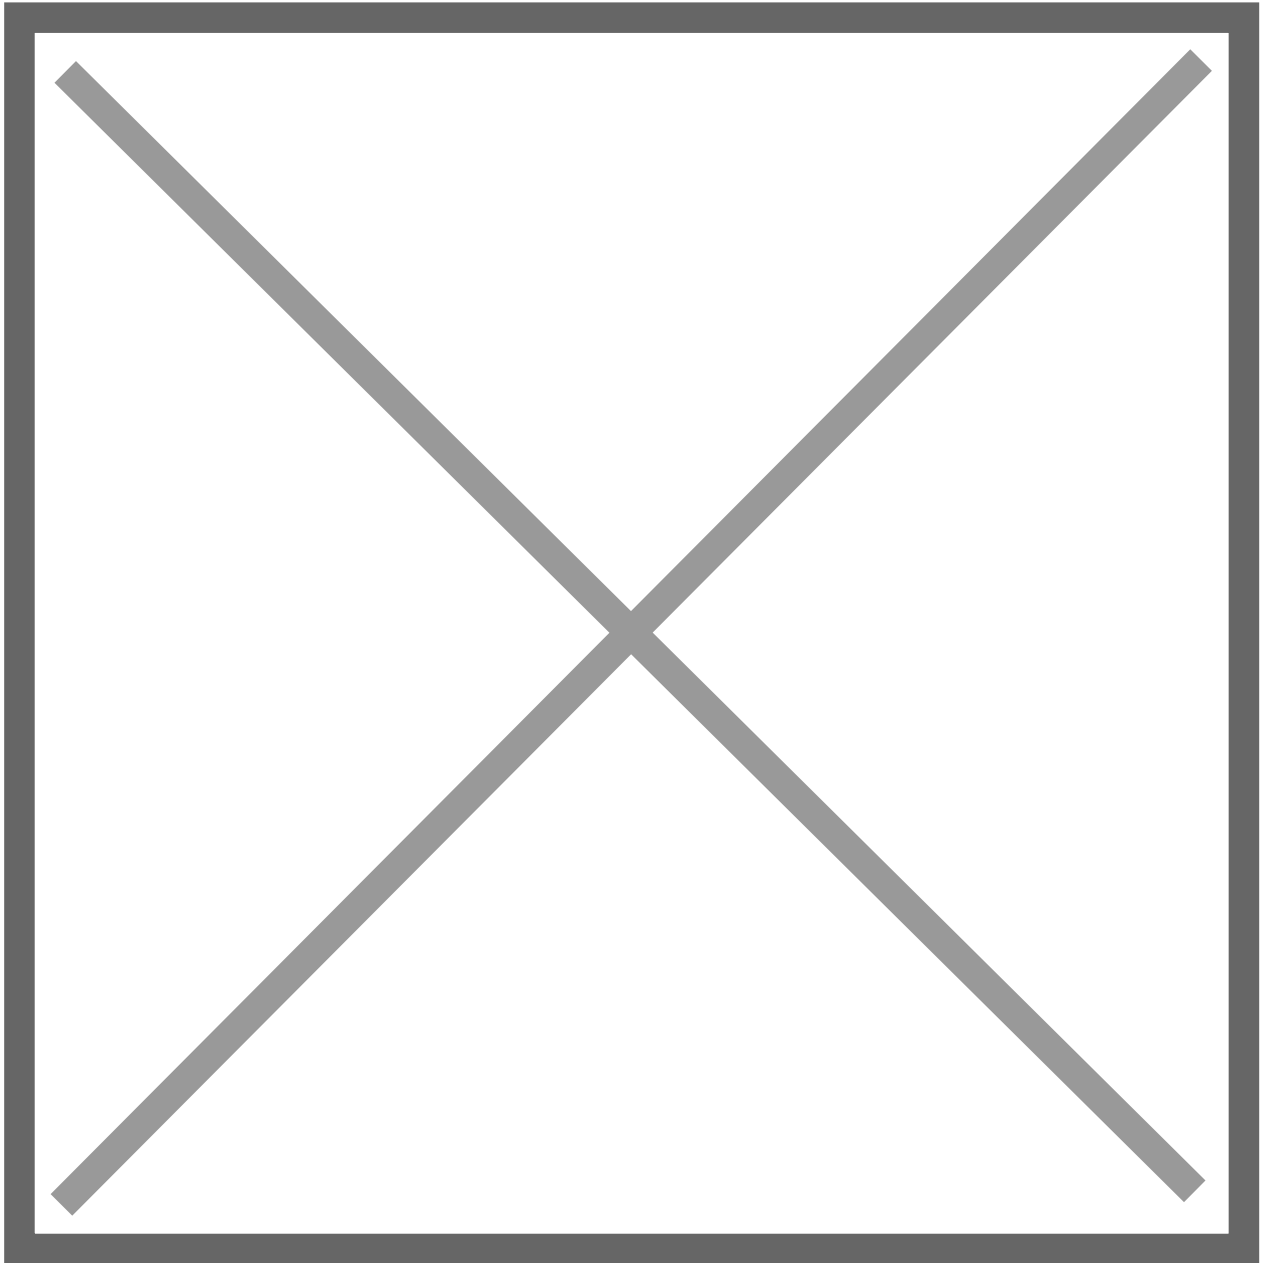

Time Tracker Exports - Discontinued

Time Tracker exports is used with a program called Badger.

This is where you use job Badger import, which is a timekeeping system for the manufacturing floor.

Staff will Clock in on a job and Clock in on another job, this is recorded in an external program .

All the time is then imported via the Badger import, then the time tracker allows one to export all the time to job costing or to a payroll system called VIP.
